# E-LINE
## TRUNKING

7-pole plug for feed, fixed

7-pole plug for electronic contacting, flexible

**One less thing to worry about: power feed as you need it**
Requirements vary from application to application and from project to project. This is where E-Line optimally integrates into a variety of situations and environments. Regardless of where the power supply is required – the structural substance of the building remains intact thanks to flexible feed-in options – whether at the face end, at the coupling point or from above into the trunking via knock-outs. Power feed into the E-Line trunking is possible with or without accessories.

**Feed from above**

**Feed at face end**

**Quick, clean and easy – refurbishing or extending continuous lines**
Fast, simple and intuitive installation is typically E-Line. After the trunking has been fixed, the gear trays are simply latched into place without tools via spring catches. The E-Line gear trays with their tapping points also fit old E-Line trunking, regardless of whether this consists of LED versions or existing T5/T8 systems. Refurbishments are therefore done quickly, easily and with minimal effort.
