

## Human Alanyl-tRNA Synthetase (PL-12)

<b>Origin:</b>	Recombinant	<b>Cat. No.:</b>	41490
<b>Tag:</b>	N-terminal 6xHis	<b>Size:</b>	0.1 mg
<b>Source:</b>	<i>Spodoptera frugiperda</i> Sf9	<b>Purity:</b>	>85%
<b>Other Names:</b>	AARS	<b>Species:</b>	Human

### Description

Expressed in insect Sf9 cells with total 992 AA. Mw: 109.8 KDa (calculated). N-terminal 6xHis-tag and TEV cleavage site, 25 extra AA (highlighted).

**Recombinant antigen for research use or manufacturing only.**

### Introduction to the Molecule

During mRNA translation at ribosomes, specific amino-acyl-tRNA synthetases are required for the covalently attachment between tRNAs and different amino acids. Alanyl -tRNA synthetase (AARS, PL-12) is specific for the amino acid alanine. PL-12 is recognized by PL-12 autoantibodies which is present in a subset of patients with polymyositis and dermatomyositis.

### Immunological Function

As an autoantigen, PL-12 binds with IgG-type human auto-antibodies.

### Amino Acid Sequence

### Applications

Standard ELISA test, line/dot assay and microarray assay with positive/negative sera panels.

### Formulation

Lyophilized at 1 mg/mL in storage buffer (20mM Tris, 300-500mM NaCl, 10% Glycerol, PH8.0).

### Reconstitution

Add deionized water to prepare a working stock solution of approximately 1 mg/mL and let the lyophilized pellet dissolve completely.

### Storage

Store lyophilized protein at -20°C. Aliquot reconstituted protein and store at -80°C. Avoid repeated freezing /thawing cycles.

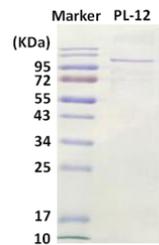

### Quality Control Test

BCA to determine quantity of the protein.

SDS PAGE to determine purity of the protein.

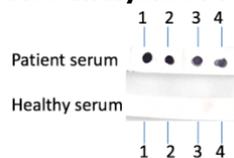

Immunodot analysis to determine functionality of protein.

### SDS-PAGE Gel

### Dot blot assay

#### Dot blot analysis of PL-12

Analysis of serum from healthy subjects and patients. Recombinant autoantigens were utilized in this dot-blot assay for validation
