

Polyclonal Antibody against Human Fatty-acid Binding Protein 5

Catalog Number: 11040**Size: 100 ug****Host: Rabbit**

Introduction to the Molecule

The fatty-acid-binding proteins (FABPs) are a family of carrier proteins for fatty acids and other lipophilic substances such as eicosanoids and retinoids. These proteins are thought to facilitate the transfer of fatty acids between extra- and intracellular membranes. The fatty acid binding protein 4 (FABP-4) and fatty acid binding protein 5 (FABP5) are closely related and both are expressed in adipocytes. Mice with targeted disruption of FABP-4 accompany FABP-5 almost completely protect against diet-induced obesity, insulin resistance, dyslipidemia, type 2 diabetes, and fatty liver disease. While mice over expressing FABP5 in adipose have reduced insulin sensitivity

Isotype/Preparation:

Rabbit crude IgG was purified by protein-G column

Immunogen:

Recombinant full-length human FABP5 expressed in *E.coli*.

Specificity:

The antibody detects human FABP5.

Formulation:

Solution in PBS. Store at -20°C. For long-term storage, aliquot and freeze at -70°C. Avoid repeated freeze/thaw cycles.

Application/Usage:

Western blot - This antibody can be used at 0.5 - 2 µg/mL with the appropriate secondary reagents to detect human FABP5.

Immunoprecipitation, ELISA and immunocytochemistry are not tested.

Quality Control Test

BCA to determine quantity of the antibody
