

# SUREGRIP<sup>®</sup> GOPHER TRAP

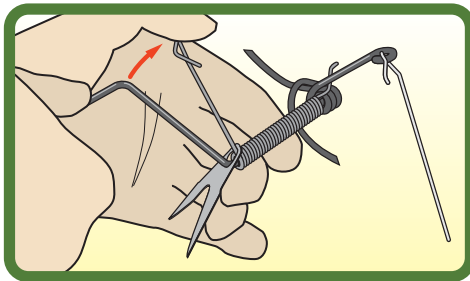

## How to set your GONZO<sup>®</sup> Suregrip<sup>®</sup> Gopher Trap

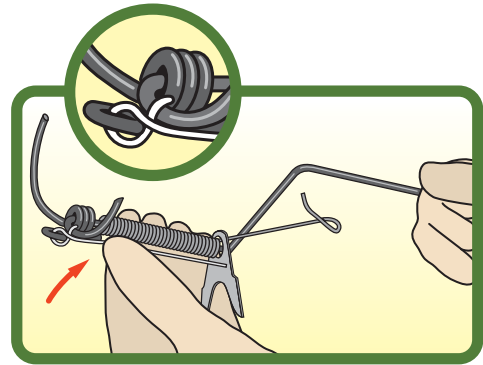

Always wear gloves when handling the Suregrip<sup>®</sup> Gopher Trap. Refer to the diagram above for part names.

Place the "set" trap in a fresh hole (no more than 2-3 days old) with the **JAWS** about 8-10 in. from the surface.

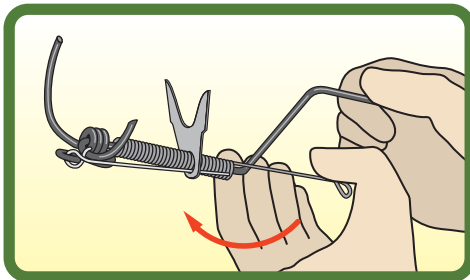

Stake the **HANDLE** of the trap securely.

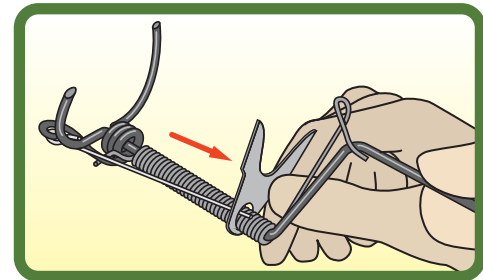

1. To set the trap, pull **spring latch** away from **handle**. Rotate counter-clockwise 270 degrees until **jaws** are fully opened.

2. Once fully opened, hook the short curved end of the **trip bar** over the top of the left **jaw**. Slide the long end of the **trip bar** under the left **jaw** and through the **trigger plate** as shown in the picture.

3. Hold the **handle** and catch the **spring latch** with your thumb. Place 2 fingers under the spring. Hold firmly, cranking the trap **handle** to the right, until the **spring latch** meets the **handle** and can be securely latched.

4. Adjust the **trigger plate** with pointed legs in the up position. Move the **trigger plate** to the end of the **trip bar**.

Trap is now set and ready to place.
