

MOLE+ GOPHER

SOLAR POWERED

SONIC SPIKE REPELLER

Placement

Make a pilot hole (using a trowel, transplanter or wooden stake) in the ground before inserting sonic spike.

DO NOT HAMMER or use **EXCESSIVE FORCE** when inserting the spike. Push Spike straight down to avoid damage.

Insert spike keeping solar panel above ground level. Tamp soil around the spike to ensure a firm fit.

Operating Instructions

Remove protective cover from the solar panel. Locate the on/off switch on the underside of the solar panel. Depress switch in the on position. Once in the on position the spike will emit a sonic sound every 25-27 seconds.

Note: One to two weeks of continuous operation are required for effective control.

Location

Identify active tunnels. Raised tunnels and/or fresh soil mounds indicate active tunnels. Place spike next to active tunnel or close to structures. Move the Repeller once a week towards perimeter of affected area until pests have retreated. Additional Repellers may be required, depending on size and shape of affected area.
