

Aion International Industries is an Irish company that exist to improve the lifestyle of health conscious individuals. We are named after the Greek God of unbounded time, aware that this is the most precious and scarce human asset.

We believe in human centric innovation as the engine for positive change. Aion International aims to disrupt industries that have a negative impact on human lifestyle, leveraging science, technology and lateral thinking to solve global issues.

Aion International's innovative smoking cessation Program, offers a radical answer to help smokers quit as they continue smoking. Our product consist of 3 components:

A. An Electronic Hardware (Aion Nano / Aion One) that captures & records user consumption data (sticks, inhalation, inhalation intensity, carbon and nicotine intake). Aion Nano sensor can be clipped to any conventional cigarette available in the market in similar fashion to a cigarette filter; Aion One has a more advanced architecture competing with iQOS & Glo and is compatible with the best-selling Heat not Burn cigarettes.

B. An Artificial Intelligence System that will operate based on a Convolutional Neural Network highly specialized in Natural Language Processing and voice recognition to spot behavioral patterns and ultimately manipulate those patterns to meet the user's goals of smoking cessation.

C. A Social Platform including Challenges and Social gamification intended to increase the success rate of our program and prevent relapse.
