

The strategic objective is to develop Laurea's solutions to open learning

"We develop, share and utilize Laurea's digital degree programmes and modules of the programmes openly in the whole university in order to effectively support education aiming at degrees and continuous learning."

(Laurea's strategy 2030, 21.)

Openness in research, development and innovation (RDI) integrated learning

We study and promote openness in RDI integrated learning in Universities of Applied Sciences nationwide through project funded by Ministry of Education and Culture. We have created a dynamic model for open, RDI integrated teaching which comprises four main concepts: open knowledge, open education, open operating environment and open cooperation involving different players. Our aim is to develop new operation models, guidance and support services for promoting and conducting openness in RDI integrated learning.
