Engineered to Work Together

Our complete door systems feature doors, glass and components engineered to work together to resist leaks and drafts, and help maintain energy efficiency and weather resistance.

- 1 Sill and bottom sweep** form a tight seal against wind-driven moisture infiltration at the bottom of the door system and help channel moisture away from the home. **Sill pan** (recommended) adds an extra layer of protection to help keep moisture away from the subfloor.

- 2 Corner seal pads** (inswing only) complete the seal between the **sill cap**, **bottom sweep** and **weatherstrip** to help block potential pathways where wind-driven moisture can infiltrate the bottom corner of the door system.

- 3 Hinges** position the **door** to properly compress the **weatherstrip** to help form a tight, even seal against air and moisture infiltration when the door closes.

- 4 Weatherstrip** is specifically engineered in a variety of profiles to provide the best possible fit with our door systems, helping to deliver a precise seal between the **door** and **frame**.

- 5 Multi-point locking system** (recommended) engages the **door** and **frame** at three points from top to bottom, helping to preserve the **weatherstrip's** seal even under wind pressure.

- 6 Lip-lite frame** (shown right) features a **compression seal** against weather on the outside of the **door** and an **adhesive seal** against weather on the outside of the **glass**. **Flush-glazed glass** (shown left) is built directly into the door without a Lip-lite frame, featuring a **high-performance adhesive weather seal** inside and out.

A Complete Door System

More than beautiful doors and glass; a complete door system includes the components used to assemble it. We manufacture or specify every aspect of a complete door system. The Therma-Tru® genuine components shown here are our premium options for long-lasting durability.

Composite Adjustable Sills ✦

Inswing and outswing composite sills resist rotting and insects. Inswing adjustable sills help to maintain a tight seal over time.

Dual-Bulb / Dual-Fin Bottom Sweeps ✦ (Inswing Only)

A dual-bulb, dual-fin design helps maintain tight contact with adjustable sill caps and creates added barriers against moisture.

7-Shape Corner Seal Pads ✦ (Inswing Only)

Innovative options include our patented jamb assembly, featuring the 7-shape corner seal pad which creates an air pocket that helps prevent a vacuum from wicking moisture up the weatherstrip.

Removable Weatherstrip ✦

Resilient design compresses when closed and springs back when open, protected by a durable jacket, for long-lasting sealing power.

Multi-Point Locking Systems ✦ (Recommended)

Increased engagement between door and frame enhances stability and the homeowner's sense of security.

(Highly recommended for 8'0" and double fiberglass doors. Not recommended for steel doors.)

Ball-Bearing Hinges ✦

Hinges with ball bearings protecting each hinge pivot, or "knuckle", offer added support and stability.

(Recommended for Classic-Craft doors, 8'0" doors, doors with glass, and Impact- and Fire-rated fiberglass doors.)

Frame Components

Check with your Therma-Tru seller for options to complete the door system, including rot-resistant brickmould, jambs, mullions and coil cladding manufactured to our specifications.

Fire Doors

Classic-Craft®, Fiber-Classic®, Smooth-Star® & Steel

The phrase
“safety first” is more
than just a saying. It’s
our standard.

From smooth to wood-grained, we have products to meet most national and local code requirements for house-to-garage, multi-family residential and hotel / motel unit entries.*

Adjusta-Fit® 2 Frame

Using the right frame is critical in any top-quality door installation, and never more so than with Fire-rated products. Therma-Tru Adjusta-Fit 2 frame technology helps ensure an optimum fit and long-lasting performance. The frames are constructed with a commercial-grade, 18-gauge base frame; galvanized steel and factory-coated paint finish; and an all-aluminum, thermally broken threshold. These features make them ideal for interior and exterior applications, including corridor openings and outside unit entries.

Therma-Tru® Adjusta-Fit 2 frames also feature these key benefits:

- 90-Minute positive-pressure Fire-rating, third-party certified by Intertek, Warnock-Hersey.
- Standard 4-7/8" ANSI 115.1, or 2-3/4" T-lip strike prep option.
- Choice of standard, public access or no-sill options.
- Minimum 22-gauge closure with 1" of adjustability, suitable for walls from 4"-9-1/2" deep.

*To confirm fire door requirements in your jurisdiction, always check with your local building code authority.
Note: To see the full results of third-party Intertek, Warnock-Hersey testing, visit www.thermatru.com/performance.

90-Minute Fire-Rated Steel Edge

Therma-Tru's TR 12-24 Steel Edge 90-Minute Fire-rated doors and door systems provide outstanding protection. Constructed with 24-gauge steel edges and tested to withstand at least 90 minutes of fire exposure at temperatures that reach more than 1,700 degrees Fahrenheit, the doors are perfect for multi-family living and house-to-garage projects. Available in a variety of door styles, sizes and lock preparations, the units are suitable for a minimum 4" wall depth or greater. Therma-Tru also offers all the necessary components – frame, weatherstrip, bottom sweep and sill – to complete a 90-Minute Fire-rated door system.

Clean lines. Crisp angles. Sleek designs. Vintage style. Pulse is a contemporary series of door styles and glass designs that can be combined to make a bold statement. With three distinct aesthetic approaches – Ari, Línea and Echo – the entrance becomes modern art.

*Please verify that there is a Therma-Tru Impact-rated product approval for the configuration before buying. Not impact tested for use in multi-lite door style configurations.

Note: Finish colors may vary from an actual application due to fluctuations in finishing or printing. Glass designs may differ from depiction due to size and hand craftsmanship of glass. See your Therma-Tru seller or visit www.thermatru.com for more, including details on limited warranties and exclusions, ENERGY STAR qualified products and product approvals.

**Door systems built with public access sills have little resistance to water penetration and have a potential to leak if installed exposed to weather. We recommend these systems be installed away from weather under large soffits or overhangs.

Therma-Tru® Door Systems

Independent Laboratory Performance Testing

At the time of manufacture, Therma-Tru exterior door systems (properly assembled with all genuine Therma-Tru components) have been tested under one or more of the following performance specifications: structural load, uniform load deflection, vertical load resistance, air infiltration, water penetration resistance, forced entry resistance, operating forces, force to latch, deglazing resistance, operating cycle performance, impact resistance, sound transmission, thermal performance and solar heat gain performance. Therma-Tru exterior door systems conform to the applicable Performance Standards / Test Methods that may include ANSI/AAMA/NWDA 101/I.S.2, AAMA/WDMA 101/I.S.2/NAFS, AAMA/WDMA/CSA 101/I.S.2-A440, ASTM E330, ASTM E547, ASTM E283, ASTM E331, ANSI/BHMA A156.2, AAMA 1304, AAMA 920, AAMA 925, ASTM E2068, ASTM F842, ASTM E987, ASTM E1300, ASTM E90, ASTM E413, ASTM E1332, ASTM E1886, ASTM E1996, PA/TAS 201, PA/TAS 202, PA/TAS 203, HUD UM89, AAMA 1702.2, 24 CFR 3280, 24 CFR 3282, NFRC 100 and NFRC 200. Refer to www.thermatru.com for design pressure and other performance ratings.

Doors

Recommended Door Overhang – For best performance, all doors should be protected by an overhang. The recommended size is half the distance from the base of the door to the bottom of the overhang. So, as an example, a distance of 10' for this dimension would require an overhang of 5' minimum. For wetter climates, southern or western exposures, and for double doors, the overhang should be the same as the distance from the base of the door to the bottom of the overhang. In this same example, the dimension is 10' so the overhang should be 10'.

For best performance, double doors to be used in areas with severe weather exposure must be installed using entry alcoves or large soffit overhangs to protect entry unit from exposure. Multi-point locking systems are highly recommended for 8'0" and double door applications.

Doorlites

Doorlites are insulated, and exposed panes are tempered. Optional wood grilles available for clear doorlites and transoms.

Inserts – All glass (except flush-glazed styles) shall be bedded with glazing mastic and secured in doors with screws. Therma-Tru's SMC and BTS doorlite frames are available for most styles except where noted. SMC and BTS frames shall resist significant deformation by heat up to 200 degrees Fahrenheit, regardless of paint or stain color or placement behind a storm door.

PVC doorlite frames must be finished within 30 days of installation. Failure to do so will increase the chance for product damage of the type that is not covered by the warranty. PVC doorlite frames are not recommended for use behind storm doors or to be painted dark colors, if exposed to direct sunlight.

Decorative Glass & Wrought Iron – Each Therma-Tru decorative glass unit is handcrafted by skilled artisans replicating Old World techniques. Each piece is a unique work of art and many things that would appear to be imperfections (small bubbles, lines and waves within the glass) are normal and are part of the Old World charm.

Condensation occurs naturally in the home, caused by excessive humidity in the air. Often this harmless water vapor can be seen collecting on glass surfaces, such as doorlites. Energy-efficient glass units in Therma-Tru door systems are constructed to keep the glass as warm as possible, reducing condensation build-up. However, there is no such thing as a condensation-free window or doorlite in high-humidity conditions.

A common attribute of true wrought iron doorlites is that a rattle sound may be heard when closing the door. This is solely a function of having real wrought iron which is heavy and has the ability to flex, moving back and forth within a narrow airspace surrounded by glass that has very little flex. This characteristic is not considered a defect or warranty issue.

NOTE: Glass privacy ratings are determined by the 1/2-lite glass size. As a result, the amount of privacy / glass transparency may be more or less than indicated by the privacy rating, based on the glass design and size of the glass that is inserted into the door, sidelite or transom.

Glass designs may differ from depiction due to the size and hand craftsmanship of glass. See your Therma-Tru seller or visit www.thermatru.com for more details.

Components

Adjustable Security Strike Plate – Proprietary adjustable type, permitting in-out adjustment of door in frame, up to 3/16".

Hinges – Minimum hinge size 4" x 4" x .098".

Ball-bearing hinges are recommended for 8'0" doors, doors using heavy lites (e.g., wrought iron), all 20-Minute Fire-rated fiberglass doors, Impact-rated doors and glass, and all Classic-Craft doors.

Use of the multi-point locking system is highly recommended for 8'0" and double fiberglass doors. Not recommended for steel doors.

Please be aware that single door units built with public access sills have little resistance to water penetration, and double doors built with these sills have a potential to leak if installed exposed to weather. We recommend that units be installed away from weather under large soffits or overhangs.

Use of a sill pan is recommended.

Fiber-Classic and Smooth-Star dentil shelves are not recommended for placement behind storm doors or to be painted dark colors, if exposed to direct sunlight.

Therma-Tru Door Surrounds must be finished within 30 days of installation. Failure to do so will increase the chance for product damage of the type that is not covered by the warranty.

Impact-Rated Products

Impact-rated products must be installed as part of a Therma-Tru door system in compliance with a Therma-Tru product approval. Visit www.thermatru.com for product approvals and full details on WBDR- (Wind-Borne Debris Region) / HVHZ- (High Velocity Hurricane Zone) compliant products. Follow weather and news reports in order to assess severe weather situations and obey local authorities' shelter and evacuation orders. No product guarantees safety for persons or property, nor makes any premises hurricane- or impact-proof.

Fire-Rating Performance Standards

Fire and building codes vary throughout the country and acceptance of products and labels is left to the discretion of the local authorities.

MODIFICATION OF PRODUCTS DESCRIBED IN THIS BROCHURE WHICH CARRY FIRE RATINGS (DOORS AND FRAMES) MAY VOID THE FIRE RATINGS.
