Parajumbled

1. P. Honesty is a moral value that must be inculcated in childhood.
- Q. Through stories children can be exposed to the virtue of honesty, so that they can easily comprehend why dishonesty should be avoided, and how honesty is vital for life.
- R. The value then takes firm foundation and can see one through life.
- S. If the trait of dishonesty starts at a young age, it becomes a habit difficult to change.

2. P. Our behaviour and character speak of the morals and ethics that we live by.
- Q. Such persons follow their moral values whatever difficulty they may have to encounter in the process.
- R. They do not fear punishment and stay in a state of peace and contentment.
- S. A person who is righteous is one who has developed moral values and lives by them.

3. P. If we manage our time effectively we can accomplish all the activities and tasks we wish to.

Q. It is important that we draw up a time table that we can adopt practically.

R. If we can stick to the time table we can then succeed in achieving our goals whether they are in the short term or long term.

S. This requires drawing up a practicable time table.

Dust storms of May 2018, in Northern India, contributed to the deteriorating air quality in the region and the capital city of Delhi, with implications for human health, a study found. The high death toll from the severe dust storms that lashed the region was mainly attributed to the intense winds, which surprised even scientists and meteorologists. But apart from the immediate damage to life and property, drastic changes in air quality from the dust engulfing the region affected far more people with potential implications for human health, stated a team of researchers who analysed the impact of the spell of dust storms that struck the region that month. They reported increases in particulate matter, mainly in Delhi and urged for an early warning system.

Dust storms commonly occur in the Indo-Gangetic Plains - the fertile plains in northern India that stretch all the way to the East - from March to May, the pre-monsoon season. Westerly winds typically bring loose sand and soil particles, picked up from the Arabian Peninsula or the Thar Desert in North Western India, to the Indo-Gangetic Plains. The dust tends to worsen air quality over the Indo-Gangetic Plains, home to around 900 million people, which can have far-reaching effects on human health. While dust storms are a regular feature in the region, the May 2018 dust storms specifically had a death toll of about 100 people, with around 200 people injured.

"We are concerned that the dust impacts the health of people who get exposed," said a senior professor. However, he also observed that scattered rains occurring soon after the dust storms tend to clean up the dust, improving air quality. During October-November, densely populated cities like Delhi and Kanpur in the Indo-Gangetic Plains are vulnerable to windborne long-range air pollution from crop residue burning in the North, and now this study "shows the effect of dust storms during the March-May time frame," Sarkar pointed out. "This really puts the Indo-Gangetic valley in a unique spot in terms of it being targeted by these different hazardous conditions which are mostly outsourced from other areas."

11. **Dust storms in Delhi** are a cause of concern as they

- (1) cause strong winds.
- (2) affect Delhi alone.
- (3) challenge scientists.
- (4) are a health hazard.

12. **Dust storms** are caused by

(1) winds from the North.

(2) winds from the South.

~~(3) Westerly winds.~~

(4) Easterly winds.

13. The notable fact about pollution in October to November is that

- (1) Westerly winds bring loose sand and soil particles
- (2) dust storms are a regular feature.
- ~~(3) it is caused by crop burning in North India.~~
- (4) it is caused by the winds from Thar Desert.

14. By saying, This really puts the Indo-Gangetic valley in a unique spot the writer refers to the fact that
- (1) the Indo-Gangetic valley receives its pollution from other areas or factors.
 - (2) the valley is affected by pollution caused by hazardous industries.
 - (3) intense winds in the valley surprise even scientists and meteorologists.
 - (4) studies find that only the valley faces pollution all year round.

15. Choose the correct sequence in which events take place

- (1) ~~Strong winds-poor air quality-dust storms-death and disease~~
- (2) ~~Dust storms-poor air quality-strong winds-death and disease~~
- (3) ~~Dust storms-death and disease-strong winds-poor air quality~~
- (4) Strong winds-dust storms-poor air quality-death and disease
