Read the passage and answer the questions below.

P P

Passage:

Technology has transformed almost every sector of modern life. In recent years, Artificial Intelligence (AI), automation, and digital platforms have changed how businesses operate and how people work. Many organizations now rely on technology to improve efficiency, reduce costs, and deliver faster services to customers. While these developments have created new opportunities, they have also raised concerns about employment and inequality.

Supporters of technological advancement argue that innovation creates more jobs than it eliminates. According to them, as older jobs disappear, new industries and professions emerge. History shows that economic progress often depends on adapting to change rather than resisting it. Therefore, investment in education and skill development becomes essential.

However, critics believe that the transition may not be smooth. Workers who lack access to training may struggle to compete in a changing job market. In addition, the benefits of growth may not reach all sections of society equally. Policymakers are therefore expected to design systems. The challenge is not whether technology should advance, but how societies can manage this transformation, responsibly. Governments, educational institutions, and industries must cooperate to ensure that economic growth remains inclusive and sustainable.

Vocabulary

verb

1. Transform - change completely

बदलाना

2. Efficiency - ability to work effectively

N

3. Innovation - introduction of new ideas

N

4. Transition - process of change

N
