

How to eradicate mold, bio slime, fungus, and yeast from fountain solution systems.

Action #1

1. Drain contaminated, spore filled fount.
2. Fill fountain tank up with clean water.
3. Add Mold Stop - 1 Pint (16 oz.) for every 5-10 gallons of infected water. Allow mixture to thoroughly circulate for 30 minutes.

Note: Include the treatment of all fountain rollers during the eradication process. *(Fill a spray bottle with water diluted Mold Stop and spray all fount carrying rollers)* Follow all local, state and federal safety measures.

Action #2

Drain tanks and Refill with fresh water.
(see below 1 thru 5)

1. Add our newer **Microburst** or original System Kleener Powder Step 1, recirculate for at least 30-45 mins.
2. Add our newer **Microburst** or original System Kleener Powder Step 2 right into the dirty Step 1, allow to recirculate for 30-45 minutes.
3. Drain tank.
4. Thoroughly flush with clean water.
5. Refill with fresh fountain solution. Dose with 1/4 oz. **Mold Stop** per gallon of water as a final precaution.

Determine whether you have Mold, Bio Slime, Fungus or Yeast as follows:

1. Remove a sample of suspect contaminate and place in a white cup.
2. Take a picture. (See Day #1 Image)
3. Allow one day for observation. If continued growth is seen as shown on (Day#2 Image), than immediate treatment is required!
