

C1000 & C999 WATER REPEL KIT

When you are driving, it is vital that you see clearly and stay safe. We made the C1000 Water Repel Kit to assure every user they will repel water off glass/windows and other nonporous hard surfaces from 3 to 6 months after using it. It is a professional grade glass/window treatment kit that anyone can use and reuse.

The moment water makes contact with a C1000 treated surface, it will bead up and move off, even at low driving speeds. If for any reason wiper blades are turned on, C1000 will not smear. A C1000 coated surface makes it much easier to remove things like bird droppings, bugs and other natural contaminants

Directions For Use:

****Do not apply in direct sunlight****

Step#1: Using a local glass cleaner, clean areas of glass to be coated and then dry.

Step#2: Apply C999 Glass Polish onto one of the supplied cotton applicators and wipe in a circular motion (to ensure complete coverage) over $\frac{1}{4}$ to $\frac{1}{2}$ of the glass surface at a time (depending on the size of the glass). Allow to dry into a powder. Use one of the supplied twice folded dry clean microfiber towels and buff residual dry powder off. Continue doing this until all areas are polished and buffed clean.

Step#3: Pour C1000 coating onto the supplied cotton applicator until it feels wet and rub onto $\frac{1}{4}$ to $\frac{1}{2}$ of the glass surface at a time (depending on the size of the glass), until all areas have been coated. Let coating cure between 3 to 4 minutes at room temperature.

Using one of the supplied twice folded dry clean microfiber towels, remove residual dried coating, applying little pressure, letting the towel do the work. Avoid any liquids from coming in contact with the coated area for at least 90 minutes after application, longer is better.
