

LIQUID SOLUTIONS

EXPERTS IN LIQUIDS PROCESSING FILTRATION AND BOTTLING

Product ref. PR – 05

Date: 28/03/19

Temperature Data Logger

Typically used to monitor the actual temperatures achieved during pasteurisation in a bottle, but could also be used to check storage temperatures, or changes in temperature during delivery or in a distribution chain.

The device has a 316 stainless case, is impact resistant, and waterproof to IP67, so could be suspended in a bottle or other container.

Data can be retrieved via USB connection to a PC and there is software included to produce temperature/time graphs, allow easy maintenance of records, etc.

Price £170

Prices exclude delivery, commissioning and VAT
