# ABOUT US

Beauty Teck International (Pvt) Ltd is a family-owned company that provides the personalized service you deserve. For over 30 years, we have been dedicated to supplying the finest medical instruments to the healthcare industry across all specialties, reaching every corner of the globe, including Europe, North America, South America, Asia, Africa, and Oceania.

Beauty Teck was established to provide solutions for supplying medical devices to operating rooms in hospitals around the world. The company's commitment to excellence and high-quality manufacturing has led BTI to expand into other medical fields.

Beauty Teck is a leading manufacturer of a wide range of sterile and non-sterile single-use and reusable surgical, dental, tungsten carbide, ENT, gynecology, manicure, pedicure instruments, and hollowware worldwide. Our manufacturing unit is located in Sialkot, Pakistan, a city renowned globally for the production of medical instruments. Our liaison office is located in Bremen,Germany facilitating collaboration and business development.

Our products are manufactured using the highest-quality stainless steel in compliance with AISI, ASTM, and DIN standards. The raw materials are imported from Germany, Japan, and France. All of the medical instruments we supply are ISO 9001:2015, ISO 13485:2016, ISO 14001:2015 certified, and CE marked under the Medical Devices Directive.The key to our success is our commitment to quality assurance. We ensure the right materials are used for the right products. We are also an OEM and ODM provider for our customers.

We offer a vast range of instruments in stock, ready for fast delivery to our valued customers. By combining traditional craftsmanship with the latest precision technologies, we are able to manufacture instruments that meet and compete with the highest international standards of quality. Beauty Teck is strongly committed to providing dedicated service to our customers, built on a foundation of quality and cost-effectiveness.

Beauty Teck offers highly competitive prices and is flexible in working with customers to ensure maximum cooperation. Our company's mission is to keep our customers satisfied, as your satisfaction is our ultimate business goal.

If you would like to receive our price list, view samples for quality assessment, become a distributor, or get more information about our premium-quality instruments, please feel free to contact us.

Thank you very much for your valuable time, and we look forward to doing business with you.

Best Regards

Managing Director
Beauty Teck

# OUR MISSION AT BEAUTY TECK

1. To provide our customers with exceptional support and premium-quality medical instruments at competitive prices.

2. To offer our customers friendly service and an easy-to-use ordering system.

3. To supply our customers with the latest available products.

4. To ensure all instruments are made from medically approved raw materials, uphold the highest quality, and follow ethical manufacturing practices.

# OUR QUALITY POLICY AT BEAUTY TECK

- Comply with the requirements of a Quality Management System consistent with ISO 13485:2016.

- Adhere to the regulatory requirements of MDD 93/42/EEC as amended by 2007/47/EC.

- Build mutually profitable relationships with our customers, ensuring their long-term success by understanding their needs and the needs of their customers.

- Achieve our commitments to quality, cost, and schedule.

- Enhance systematic research and the use of best preventive practices at all levels to ensure reliable risk management.

- Drive continual improvement and innovation based on efficient business processes, internal auditing, well-defined measurements, best practices, customer surveys, and systematic improvement of our client base.

- Develop staff competencies, creativity, empowerment, and accountability through appropriate development programs while demonstrating strong management involvement and commitment.

- Beauty Teck International strives to be the best provider of medical instruments in the industry. Through the use of these guiding principles, everyone at Beauty Teck International is accountable for fully satisfying our customers by meeting or exceeding their needs and expectations while adhering to our quality objectives.

# OUR STRATEGY AT BEAUTY TECK

1. It is our utmost priority to serve our valuable customers with fairness, honesty, sincerity, trust, and cooperation in building trustworthy relationships.
2. We always warmly welcome our customers' opinions, suggestions, and recommendations.
3. The stainless steel used in the production of our instruments matches the approved samples exactly.
4. For cutting instruments like scissors and knives, we use premium-quality stainless steel (AISI 420 Grade).
5. For non-cutting instruments like forceps, tweezers, needle holders, retractors, and scalpel handles, we use AISI 410 Grade stainless steel.
6. For cannulas, impression trays, and hollowware, we use AISI 304 Grade stainless steel.

# QUALITY MANAGEMENT SYSTEM (ISO 13485:2016)

The quality policy serves as the main guiding principle that focuses on quality throughout the organization and enhances the effectiveness of the quality management system.

*嘴部分は、歯牙の唇舌・頬舌側隙形にフィットし歯牙を把持することができる。
*頭部は、頭部屈曲部がカーブ形態のため鉗子が目的部位まで容易に到達する。
*バランスは、頭部とハンドル部のバランス比により嘴部分まで力が伝わりやすく、骨植の良い歯牙でも無理なく抜歯が可能。

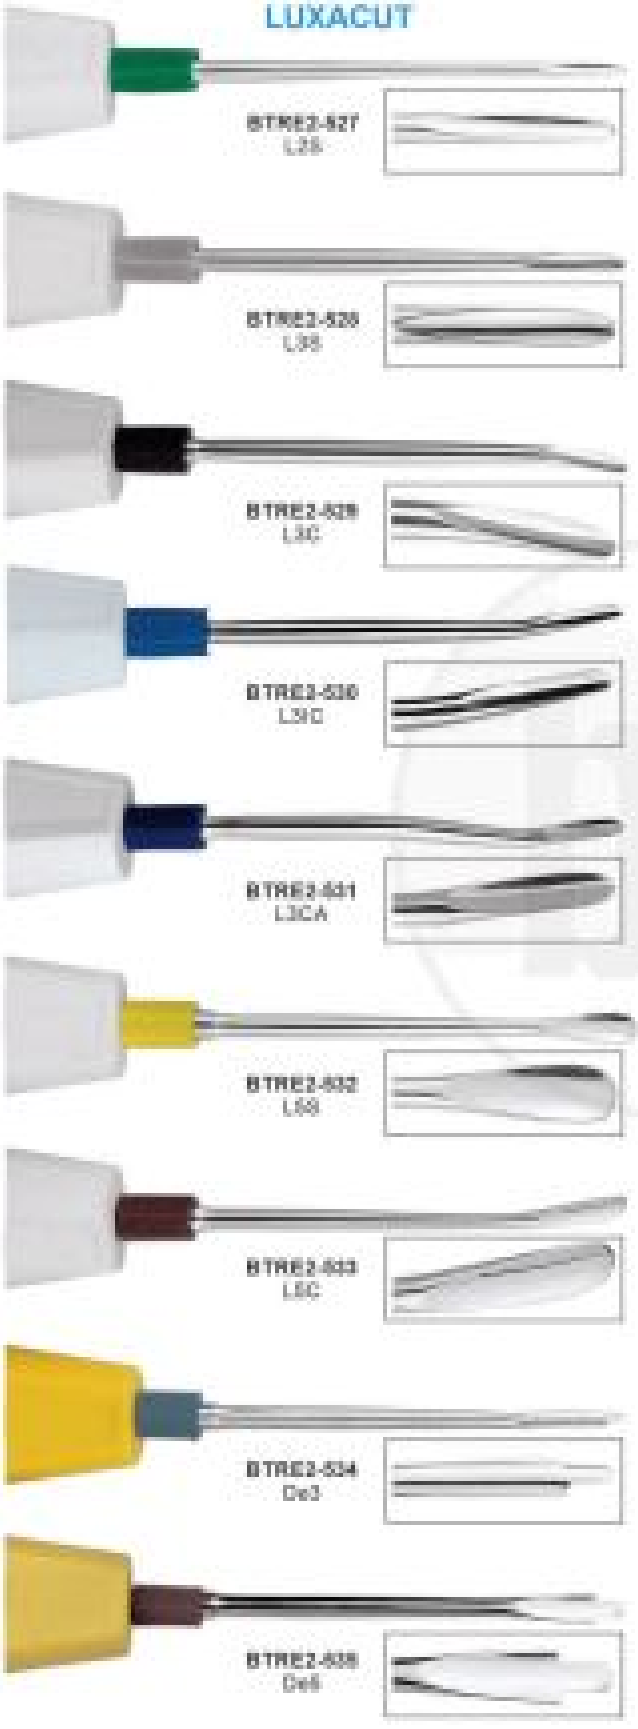
## LUXACUT



**Luxacut Luxation Instrument**

In recent years, there has been a growing emphasis on minimizing trauma during tooth extraction procedures. Elevators have become commonly used to loosen teeth prior to employing forceps. Luxation instruments feature tips that are more finely tapered compared to elevators, combining the qualities of a Periotome and an elevator. Their sharp tips facilitate more effective cutting of the periodontal ligament, while the tapered shafts allow for controlled expansion of the bony socket. This approach enables the extraction to be performed with minimal tissue damage, leading to faster healing and making the procedure less stressful for both patients and dental professionals.

**The Luxacut Kit comprises of seven Luxation instruments, a straight, curved, inverted curved & contra blade version in Three different widths.**
**Also available in dual edge blades**

- **BTRE2-527**-L3S Straight Blade- Green- 2 mm- Apical and/or Interproximal
- **BTRE2-529**-L3C Curved Blade- Black- 3 mm General use/Starter
- **BTRE2-528**-L3S Straight Blade- Grey- 3 mm Interproximal
- **BTRE2-531**-L3CA Contra Angle- Blue- 3 mm Lingual and/or distal-Molars
- **BTRE2-530**-L3IC Inverted Curved- Light Blue- 3 mm- General, Lingual and/or Distal
- **BTRE2-533**-L5C Curved Blade- Brown- 5 mm- Large molar roots- General use

**Gracey Curettes Set Standard**

Gracey Curette Blade design is offset from the terminal shank at 70°.
This creates one cutting edge which is rationed to as the lower edge.
The area specific to allow for deep scaling, root planning & periodontal debridement.
The offset blade provides a perfect working angulation for the tooth surface.
Gracey Curettes are used to a set to completely scale the dentitions.

**Gracey Curettes Mini**

The terminal shank of the Gracey curette blad is 3mm longer and the work endpieces are 50% shorter. This modification allows better access to the narrow root surfaces. A reduction in the widening of the gingival tissue when inserting the instrument is also an advantage of the shortened blade. Perfect for the front tooth region and for better access to all mesial and distal surfaces.

### COMPOSITE INSTRUMENTS USE:

A composite, tooth-colored filling is used to repair teeth affected by decay, cracks, or fractures. The damaged portion of the tooth is removed, then filled with a composite material. Various filling options are available, each with unique benefits and drawbacks, and you and your dentist can choose the most suitable one for your needs. Along with silver amalgam, composite fillings are among the most common choices today. Because they match the natural color of your teeth, they are especially popular for restoring front teeth or visible areas, providing a natural appearance. Like most dental restorations, composite fillings are not permanent and may eventually need replacement. They are highly durable and can last for many years, helping you maintain a beautiful, long-lasting smile.

### HOW ARE COMPOSITE FILLINGS PLACED?

Composite fillings are typically completed in a single visit. While the tooth is numbed, your dentist will remove any decay as needed. The prepared cavity will then be meticulously cleaned and carefully shaped before the new filling is applied. If the decay was close to the tooth's nerve, a special medication may be used for extra protection. Finally, the composite material will be carefully placed, sculpted to match your tooth's natural shape, and polished to ensure a smooth finish, restoring both the appearance and function of your tooth.

### How are composite fillings placed?

It is common to feel some sensitivity to hot and cold sensations after your composite filling is placed, but this should diminish soon as your tooth adjusts to the new restoration.You will receive care instructions at the end of your appointment. Maintaining good oral hygiene, monitoring your eating habits, and scheduling regular dental check-ups will help prolong the lifespan of your new filling.

### HOW ARE COMPOSITE FILLINGS PLACED?

Composite fillings are typically completed in a single visit. While your tooth is numb, your dentist will eliminate any decay present. Next, the prepared area will be thoroughly cleaned and carefully shaped to ensure proper placement of the new filling. If the decay was close to the tooth's nerve, a special medicated substance will be applied to provide extra protection. Finally, the composite material will be precisely placed, molded, and polished to restore your tooth's natural shape and function.

### HOW ARE COMPOSITE FILLINGS PLACED?

It is common to feel some sensitivity to hot and cold sensations after your composite filling is placed, but this should diminish as your tooth adjusts to the new filling. At the end of your appointment, you will receive instructions on how to care for your restored tooth. Maintaining good oral hygiene, mindful eating habits, and scheduling regular dental check-ups will help extend the lifespan of your new filling.

### Function: Gingival Cord Packer

Cord packers are dental tools designed to insert gingival retraction cords into the sulcus. Those with rounded, smooth (non-serrated) working ends are intended for gentle, atraumatic placement of the cord, while serrated cord packers should be reserved for use with braided cords.

**BTCP3-1297**

## Retraction Cord Packer Serrated Set of 4 Pcs

Dental Instruments Gingival Cord Packer

Tissue Retraction Packing Cord Packer Round 1.5mm is a gingival retraction cord packing instrument designed with serrated edges. These tools are used to gently pack gingival retraction cords into the sulcus, helping to retract the gum tissue for accurate impressions. Serrated cord packers are specifically used braided cords to ensure secure & atraumatic placement, aiding in precise dental procedures.

### Gingival Retraction Cord Packers

The specially designed serrated edges of these tools facilitate easier packing of retraction cords. They are primarily used to gently push the gum tissue away from the prepared margins of the tooth, helping to retract the tissue and create an accurate impression of the teeth.

**Flexible Sinus-Lift Curettes – for an optimum sensitivity during the direct lift procedure**
The perforation of the Schneiderian membrane is a complication that often occurs during a maxillary sinus floor augmentation procedure. The Sinus-Lift instruments increase the sensitivity by blunt and flexible working tips with "Swing Effect". Because of their special shapes and the characteristic of the stainless steel between the handle and the active part, light pressure is cushioned and gives the operator a direct and sensitive response. At the same time the risk to perforate the Schneiderian membrane is reduced to a minimum. Already at the development the focus was a practicable handling. Because of varying angulations and shapes of the active parts also in difficult areas they are easy to navigate also in difficult areas. The line of curettes consists of six different figures for every situation. They are complemented by spoon and condenser to place the bone graft.

The "Schneider's Membrane" of the sinus can be detached with curette by 1–2mm along the total cortical bone.

Curette is particularly useful in the lower part for detaching the membrane farther. The same goes for the caudal area, especially when the membrane is 4–8 mm above the base of the maxillary sinus and the maxillary sinus is built up with granular material.

Curette makes it possible to lift the membrane further in mesial region. One working tip is especially designed for the right maxillary sinus and the other for the left maxillary sinus.

With curette the sinus membrane is further elevated in the upper and posterior part of the maxillary sinus wall.

With curette the sinus membrane is further detached over a broad area in the inner region, especially along the roof of the palate.

**Periosteal Elevator**
A sturdy metal instrument featuring a broad, flat, and thin tip designed to gently separate the periosteum from the underlying bone and elevate it during surgical procedures. Related instruments include the Bayre elevator and the Matson elevator.

**Periosteal**
Pertaining to or originating from the periosteum, the outer fibrous layer covering bones.

**Periosteal Bud**
A developmental stage in bone formation where a vascular & cellular extension from the periosteum invades cartilage, leading the replacement of calcified cartilage with bone tissue.

**Periosteal Reaction**
The formation of new bone tissue by the periosteum as a response to injury, inflammation, or irritation.

**Periosteal Stripping**
The surgical removal or tearing of the periosteum, which can occur during fractures and may impair blood supply, potentially delaying the formation of a healing callus.

## Flexible Periotome Kit with Titanium set of 6 Pcs
## BTFP4-317

### Periotome Flexible function

Micro-serrated design for straightforward and efficient separation of the periodontal ligament. Coated with titanium to enhance hardness and extend durability.

Offer introduces new, flexible periotomes that elevate both functionality and safety when severing the periodontal ligament during tooth extraction preparation. Crafted from resilient, flexible stainless steel, these tools feature serrated edges and are engineered with varying "stress relief" zones. Two distinct sets are available: the MSP-1F and MSP-2F, with a range of motion exceeding 6 degrees, and the MSP-1XXF and MSP-2XXF, with flexibility exceeding 10 degrees. Both sets are highly resistant to spontaneous breakage and offer unique advantages. The MSP-1F and MSP-2F deliver the rigidity needed for tasks requiring strength, while the MSP-1XXF & MSP-2XXF provide the flexibility required to navigate root surface contours and assist in identifying the optimal insertion path.

### Periotome Flexible function

Micro-serrated design for effortless and effective separation of the periodontal ligament. Coated with titanium to enhance durability and extend tool lifespan.

Offer introduces new, flexible periotomes that add a new level of functionality & safety when severing the periodontal ligament during extraction procedures. Crafted from resilient, flexible stainless steel, these instruments feature serrated edges & are engineered with strategically placed "stress relief" zones. Two distinct sets are available: the MSP-1F and MSP-2F, offering a range of motion of over 6 degrees, & the MSP-1XXF and MSP-2XXF, with a range exceeding 10 degrees. Both sets are highly resistant to spontaneous fractures & offer unique advantages. The MSP-1F and MSP-2F provide the rigidity necessary for tasks requiring strength, while the MSP-1XXF & MSP-2XXF deliver the flexibility needed to follow root surface contours and assist in identifying the most effective insertion path.

### Peritome Flexible function

Micro serrated for straightforward and effective separation of the periodontal ligament. Coated with titanium to increase hardness and extend the tool's durability.

Offer introduces a new line of flexible peritomes that enhance both the functionality and safety of severing the periodontal ligament during extraction procedures. Manufactured from resilient, flexible stainless steel, these instruments feature serrated edges and are designed with varying "stress relief" zones. Two different sets are available: the MSP-1F and MSP-2F, which offer a range of motion exceeding 5 degrees, & the MSP-1XXF and MSP-2XXF, with a range surpassing 10 degrees. Both sets demonstrate high resistance to spontaneous fracture and come with distinct advantages. The MSP-1F & MSP-2F provide the rigidity required in situations demanding strength, whereas the MSP-1XXF and MSP-2XXF offer the flexibility needed to follow root surface contours and assist in identifying the most effective insertion paths.

## Thermoplier Pliers

Precision Adjustments Designed to create and modify force points, slots, hooks, and spaces in aligners. Targeted Tooth Movement Force points apply controlled pressure to guide teeth into optimal alignment. Heated Application Pre-heating required for smooth and precise modifications. Autoclavable & Reusable Ensures safe, sterilizable use in clinical settings. Patent-Protected Design U.S. Patent #6,283,750. A complete set (#52530 Maxillary & Mandibular Plier Set).

| | | Purpose / Indication | Position on Aligner |
|---|---|---|---|
| |  **BTTPS-208** ○ Red<br>Thermoplier® Undercut Enhancer Pliers | Adjust loose aligners by tightening/bending plastic at interproximal points | Undercut areas/ embrasures on both sides of the aligner alternating undercuts |
| |  **BTTPS-209** ○ White<br>Thermoplier® Maxillary Tooth Moving Pliers | Tip or rotate larger teeth | Center of the target tooth |
| | **BTTPS-210** ○ Blue<br>Thermoplier® Mandibular Tooth Moving Pliers | Tip or rotate smaller teeth | Center of the target tooth |
|  | **BTTPS-211** ○ Yellow<br>Thermoplier® Mesio-Distal Pliers | Tip, torque or rotate smaller teeth laterally. Allow contact close to incisal edge | On the correct location on the target tooth |
| | **BTTPS-212** ○ Purple<br>Thermoplier® Mesial-Distal Pliers | Lateral movement of both posterior and anterior teeth; Allow contact close to incisal edge | Appropriate interproximal areas |
| | **BTTPS-213** ○ Gray<br>Thermoplier® Large Circle Pliers | Increase the size (diameter) of a large existing force point; Elevate H.T.® Hooks off of teeth | In the area around the force point or hook |
| |  **BTTPS-214** ○ Pink<br>Thermoplier® Small Circle Pliers | Increase the size (depth) of small existing force point | Location of the existing force point |
| | **BTTPS-215** ○ Black<br>Thermoplier® Bite Plane Pliers | Make bite plane aligners without acrylic | On the resulting mark from articulating paper |
| | **BTTPS-216** ○ Brown<br>Thermoplier® Bubble-Forming Pliers | Create additional space in the aligner for the target tooth to move into | The location opposite force point on target tooth |

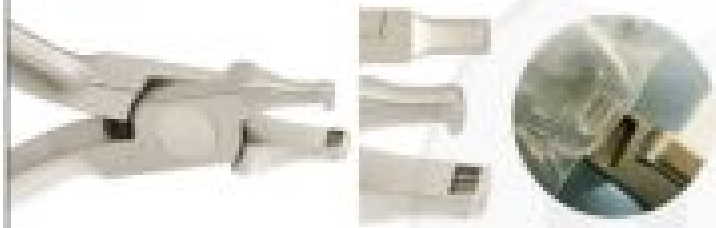
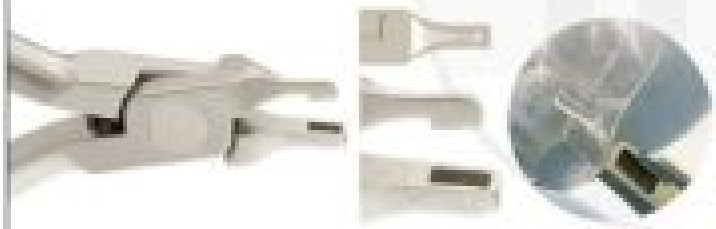
**BTPP5 le Punch Plier**
Designed for effortless creation of round holes in aligners with a single squeeze. No heating of the plier or aligner is required, streamlining the chairside process and saving valuable time. The punching tip features a hardened, precision-crafted surface for consistent, clean perforations.

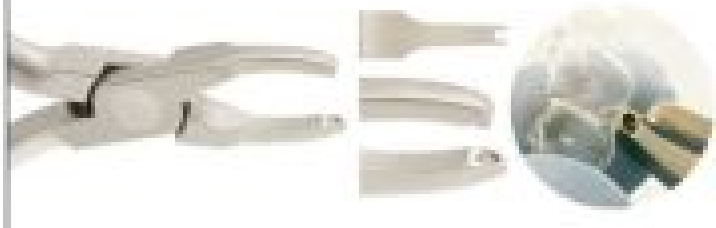
**BTPS-218**
An instrument designed to create a notch at the gingival margin of clear aligners wherever elastic hooks are needed along the arch. The Tear Drop forms a small reservoir that securely holds elastics in place while the aligner is worn, allowing for easier & more convenient elastic placement and removal by the patient.



**BTPS-219**
The Horizontal instrument creates a precise indentation to emphasize individual root torque.It also enhances the retention of clear aligners or retainers by forming an indent in a tooth's undercut or just beneath a bonded attachment.



**BTPS-220**
Correcting tooth rotations can be challenging with aligners. The Vertical instrument aids in over-correcting rotations by creating precise indentations at the mesial or distal line angles on the facial and/or lingual surfaces of the targeted tooth. Alternatively, a rotational couple can be formed by placing vertical indents on both facial and lingual surfaces on opposite sides of a tooth. Additionally, the Vertical can be used to apply a subtle "nudge" to help resolve minor in-and-out alignment discrepancies.



**BTPS-221**
Designed to create a round dimple anywhere on the aligner with a simple squeeze—no heat required. The dimple plier forms precise indentations without distorting the aligner, ensuring accurate and reliable placement every time.

**BTDPS-222**
**Dimple Erasing Plier**
This plier is used to remove unwanted protrusions or dimples from aligners. Simply position the beak over the target area and squeeze to flatten the surface.

Aligner Pliers are precision-engineered to create controlled modifications on orthodontic aligners without causing distortion no heating required. They enhance torque application, improve rotational control, & increase aligner retention.
**Family Name:** Orthodontic Pliers
**Intended Use:** Designed for creating holes or shallow indentations in orthodontic aligners.
These pliers are intended exclusively for use in dental orthodontic procedures.
**Types Available:** Thermal and Non-Thermal Pliers

## Non Thermal Pliers

**The Hole Punch Plier**
BTPPS-223 **Punch Size 6mm**
BTPPS-224 **Punch Size 5mm**
BTPPS-225 **Punch Size 4mm**

Hole Punch Plier is used to cut a half-moon-shaped notch at the gingival margin of clear aligners. This allows space for bonded buttons, orthodontic tubes, or brackets with hooks, and can also be used to relieve soft tissue impingement caused by the aligner.

**THE HORIZONTAL / Torque Plier**
BTTPS-226

Horizontal Aligner Plier creates a horizontal indentation designed to apply individual root torque. It also improves the retention of clear aligners or retainers by forming an indent in a tooth's undercut or just below a bonded attachment.

**THE VERTICAL / Rotation Plier**
BTRPS-227

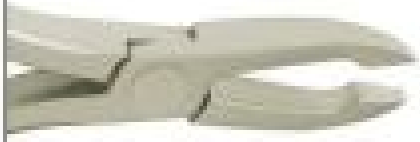
Vertical Aligner Plier creates a precise vertical indentation on the aligner to aid in individual tooth rotation. It can also be used to apply a gentle "nudge," helping to resolve minor in-and-out discrepancies for improved tooth alignment.

**PEARL DOT Smooth 1 mm / Retention Plier**
BTPPS-228
**PEARL DOT Smooth 2mm / Retention Plier**
BTPPS-229

Pearl Dot Smooth Aligner Plier creates a smooth, circular indentation approximately 1 mm in diameter, enhancing retention in both retainer and aligner systems.

**TEAR DROP/ Key Hole Cutter**
BTTPS-230

Tear Drop Plier creates a precise tear-shaped notch or hook at the gingival margin of a clear aligner. This notch acts as a reservoir to secure elastics during wear, allowing for easier placement and removal by the patient while maintaining optimal aligner fit.



**Dimple Erasing Plier**
BTDPS-231

This plier is designed to eliminate protrusions and dimples from orthodontic aligners. To use, position the beak over the dimple and gently squeeze to flatten the surface without damaging the aligner.

Confirmation Letter Reference: CLNB1639 – PK/SKT/233480

To whom it may concern,

Confirmation of receipt of the review of a formal application, written agreement, and appropriate surveillance in the framework of Regulation (EU) 2017/745 concerning Regulation (EU) 2017/745 of 5 April 2017 (EU 2017/745) as regards the transitional provisions for certain medical devices and in vitro diagnostic medical devices.

This letter confirms that, SGS Belgium NV, a Notified Body (NB) designated against Regulation (EU) 2017/745 (MDR) and identified by the number 2128 (or NANDO), has received a formal application in accordance with Section 4.3, First subparagraph of Annex VII of MDR and has signed a written agreement in accordance with Section 4.3, second subparagraph of Annex VII of MDR with the following manufacturer:

**Legal Manufacturer:**
**Beauty Teck International (Pvt) Ltd.**
Head Murale Road, Muridke
Kallian 54810, Pakistan
SRN Number: PK-MF-000009004

**EU Authorized Representative:**
**EMI Medical Devices & Drugs S.L.**
C/ Monte Lerguo, 18 - 28290

SRN Number: ES-AR-000020403

The devices covered by the formal application and the written agreement mentioned above are identified in the Tables below. Table 1 identifies the devices which an MDR application has been received and/or agreement concluded and for which the NB is also responsible for appropriate surveillance of the corresponding devices under the applicable Directive. Table 2 identifies the devices for which an MDR application has been received and a written agreement concluded, but the NB has not yet taken the responsibility for appropriate surveillance of the corresponding devices under the applicable Directive.

In the case of devices covered by certificates issued under Directive 93/42/EEC (MDD) or Directive 90/385/EEC (AIMDD) that expired after 26 May 2020 and before 26 May 26 2024, without having been withdrawn, this letter also confirms that:

SGS

- The manufacturer signed the written agreement under MDR by the date of MDD/AIMDD certificate expiry: 24-05-2024.
- The certificate expired after 26th May 2021 by source of time and were valid at the date of their expiry neither having been suspended nor withdrawn.

The transition timeframes that apply to the devices covered by this letter, subject to the manufacturer's continued compliance to the other conditions specified in Article 120.3 of MDR (as amended by EU 2023/607), are listed below:

- 26th May 2028 for Class III implant-made implantable devices.
- 31st December 2027 for Class III devices and Class IIb implantable devices excluding their established technologies (ABET – sutures, staples, dental fillings, dental braces, bone screws, screws, wedges, plates, wires, pins, clips and connectors).
- 31st December 2028 for other Class IIb devices, Class IIa, Class I devices placed on the market in sterile condition or have a measuring function.
- 31st December 2028 for devices non-requiring the involvement of a notified body under MDD (non-requiring it under MDR (e.g., class I devices that qualify as in vitro diagnostic instruments).
