

GYN Pathogen Testing

Combine the latest advancements in molecular diagnostics and drug discovery science into actionable patient-centered diagnostics to determine most effective treatment plan for each patient.

- **Results delivered in 24-48 hours**— Industry leading turnaround time with advanced analysis for superior results in a fraction of the time.
- **Superior Support**— Specialty-trained and licensed healthcare professionals are available to discuss results and help determine the most appropriate drug and dose for your patients.
- **Less Invasive**— Takes the pain and embarrassment out of sample collection. Samples collected from the point of infection provide the highest level of sensitivity and yield higher detection rates than conventional methods.

Genital pathogens detected include:

- Bacterial Vaginosis
- Candida Vaginitis
- Trichomonas Vaginalis
- Chlamydia
- Gonorrhea
- Mycoplasma
- Ureaplasma
- Herpes
- Human Papillomavirus (HPV)
- Group B Strep

**Results
in 24-48
Hours!**
