

NATURE 4 CITIES

Be Part of the Green Transition

CitizenSay

Nature4Cities Demonstration

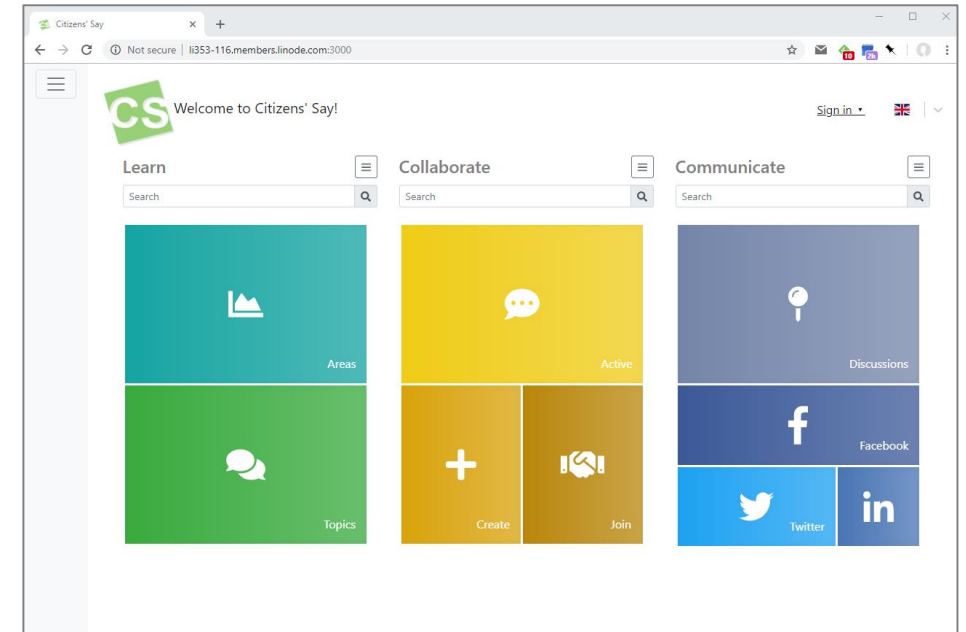

CitizenSay Demonstration

After participating this demonstration you will be able to answer these questions:

- What is CitizenSay?
- What does it do in Nature4Cities?
- How do you create a workflow?
- How do you participate in a workflow?
- How do you analyse and present outcomes?

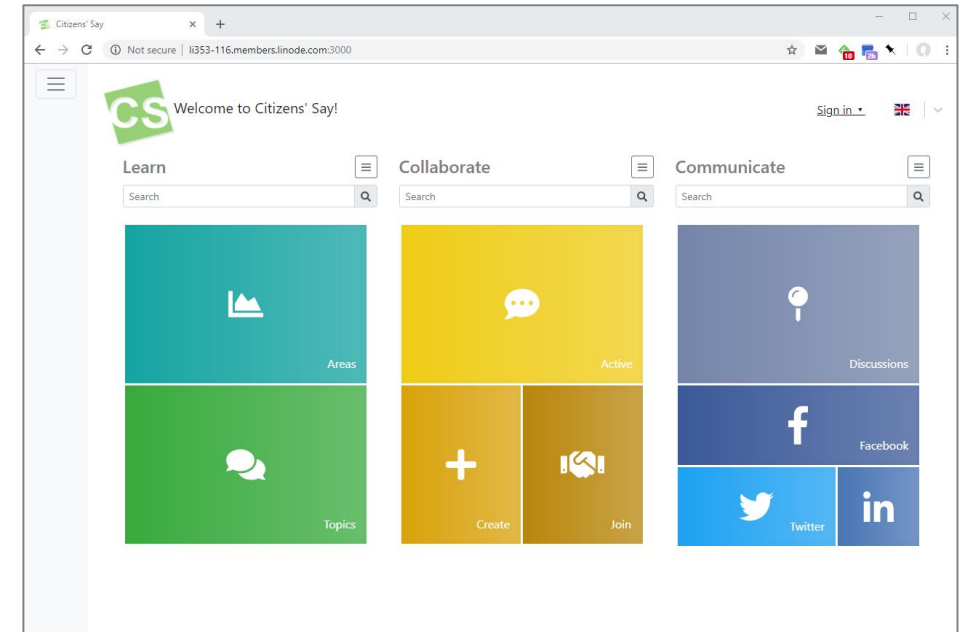

What is CitizenSay?

CitizenSay is a collaboration and consultation platform. It allows you to:

- Plan, structure and manage collaboration and consultation processes and workflows
- Use online tools to gather data
- Use online tools to facilitate collaboration
- Facilitate real-time discussions, consultations and collaborations
- Use online tools to analyse and summarise results

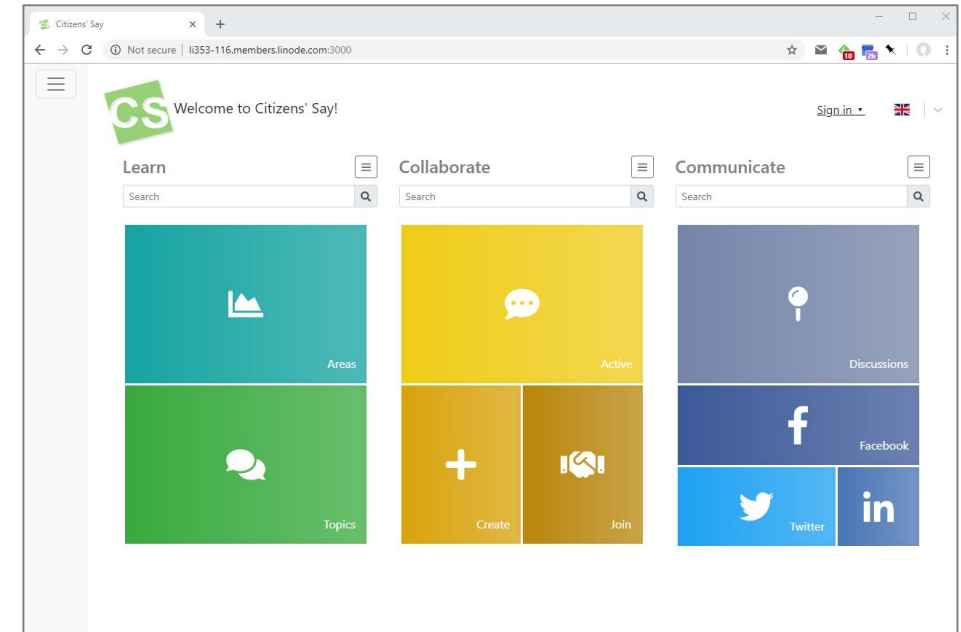

What does it do in N4C?

In Nature4Cities, the purpose of CitizenSay is:

- To facilitate online consultations and information meetings
- To facilitate collaborative development of ideas with different groups of stakeholders
- To enable users to use and manage consultation and collaboration processes that have been formulated following best practices in the domain (including step-by-step guide processes)
- To gather data from citizens for instance through online surveys or through online discussions (including Environmental QoL survey data gathering)

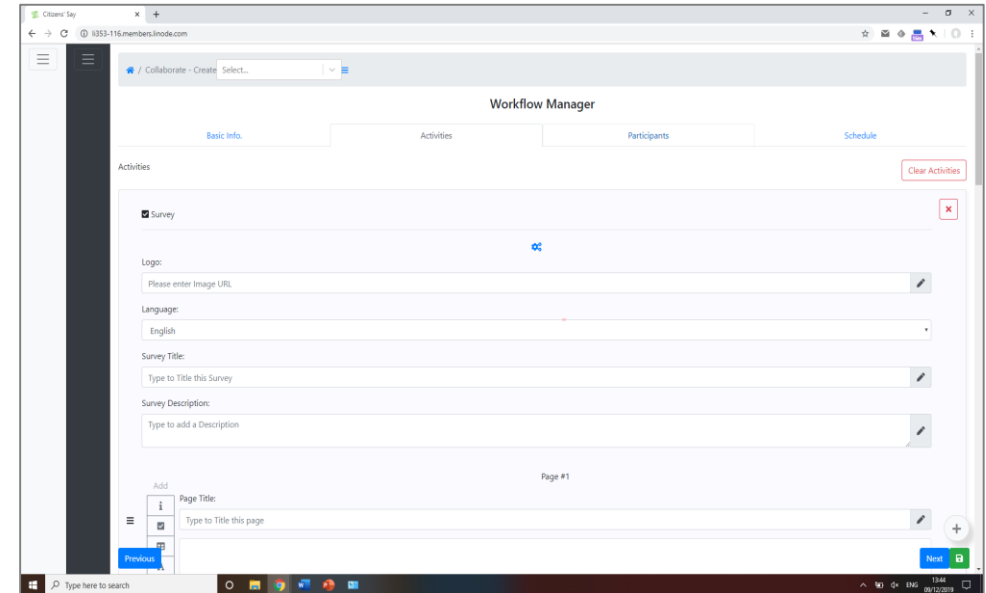

How do you create a workflow?

CitizenSay uses Collaboration Workflows to define collaboration processes:

1. Create a new workflow
2. Define access rights
3. Add activities
4. Schedule activities

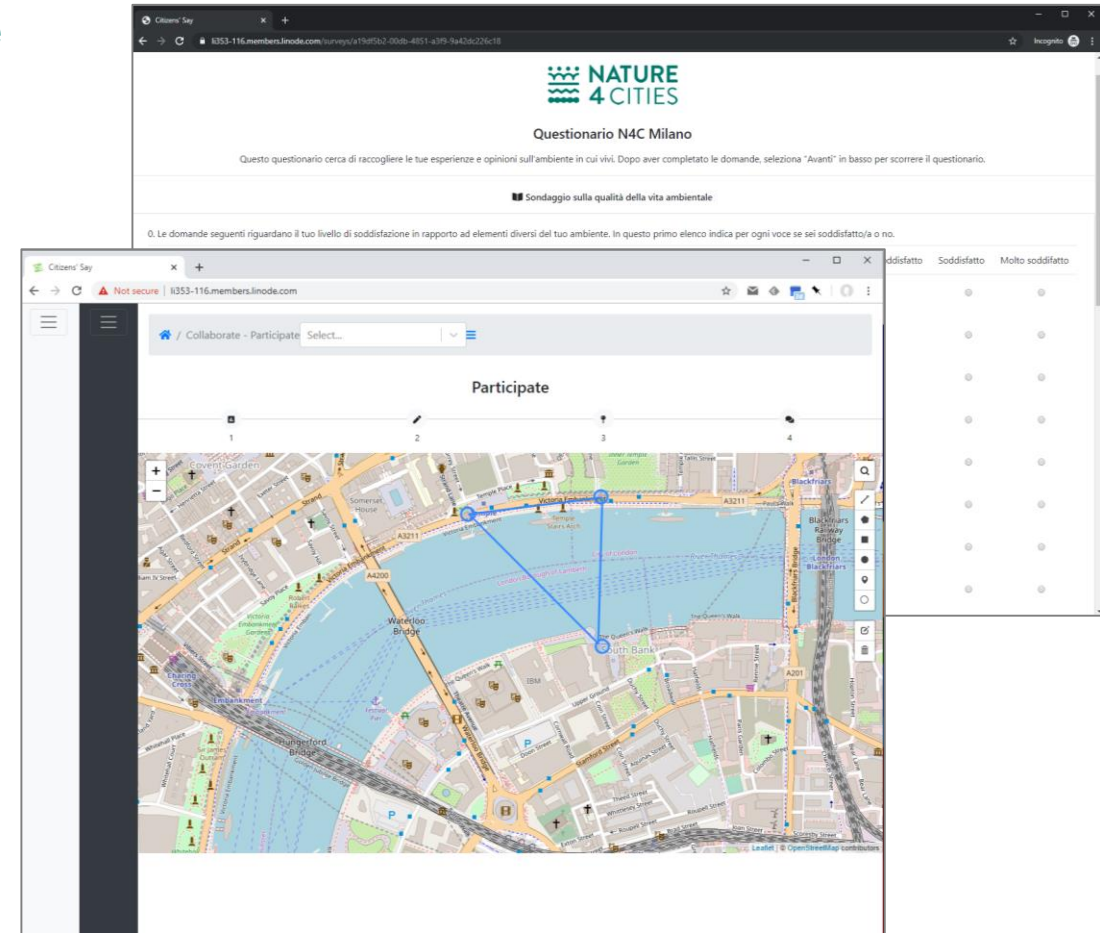

How do you participate?

Depending on the workflow configuration, users can complete activities:

- In their own time or together in online sessions
- With or without having to register a user account
- With or without access to results and other users' data
- In their own language

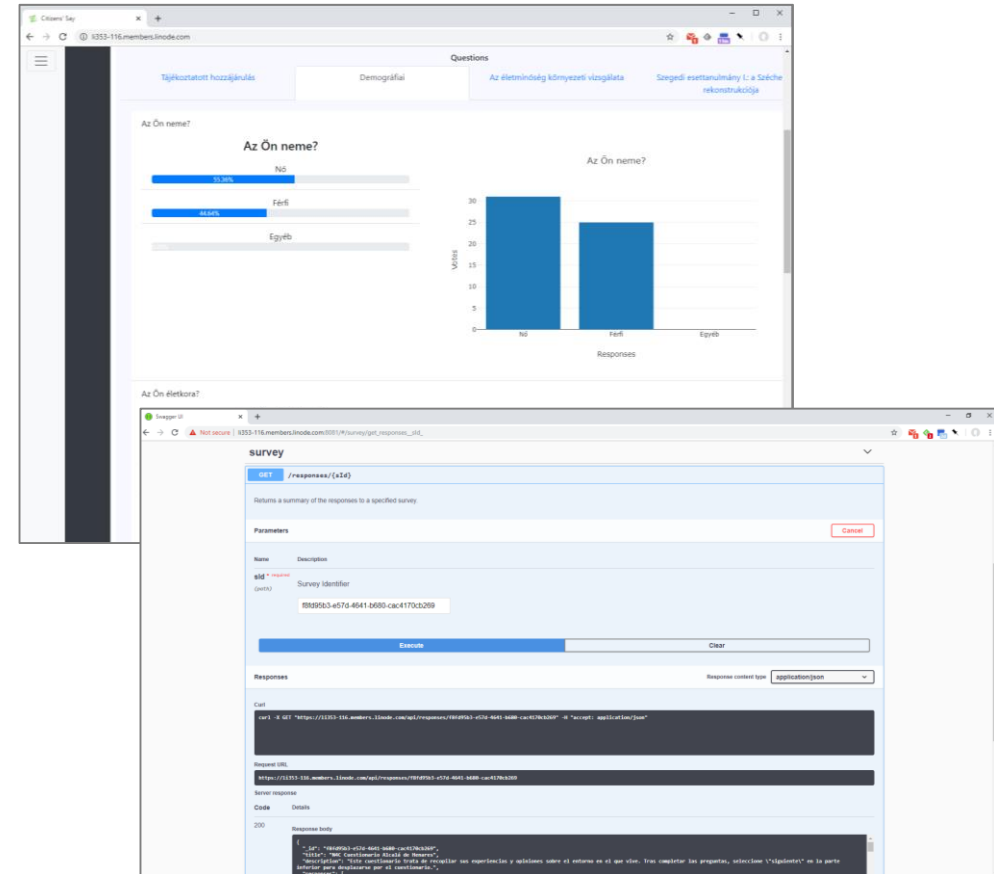

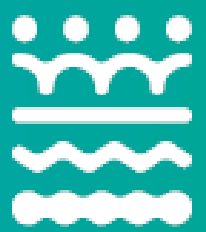

How do you analyse?

CitizenSay not only allows users to create and manage workflows, it also:

- Automatically generates activity log files,
- Generates summary statistics for polls and surveys,
- Analyses discussion content in order to extract key terms and user sentiment towards them (beta feature)
- Allows users to publish data to participants
- Export gathered data for further processing
