

ELECTRONIC SAFE LOCK RECOVERY TOOL

The Phoenix Electronic Safe Lock Recovery Tool eliminates the need to drill most keypad equipped safes in the event of a lock out due to lost combination, lock malfunction or keypad failure. Simply remove the existing keypad, plug the lock and/or keypad cable into the Phoenix and select the appropriate opening or diagnostic feature from the on-screen menu. In minutes the Phoenix will have the safe open with no drilling, no repairs to the safe and no replacement of the lock.

Compatible with locks from

AMSEC - LAGARD - LP - NL - S&G - SECURAM - SENTRY

Includes:

- Phoenix v3.2 Electronic Safe Lock Recovery Tool
