Silver ions are increasingly being recognized for their broad-spectrum antimicrobial qualities and bandages impregnated with silver ions are especially in demand because they prevent bacterial growth and therefore speed healing time, making them extremely valuable for treating burn and wound victims.

Today, consumer healthcare companies like Johnson & Johnson and others offer their own lines of band aids and dressings that use silver ions as an active ingredient to accelerate wound healing.

Silver Ions have actually been proven to promote the growth of new cells, thereby increasing the rate at which wounds heal.

The fact that silver ions are effective against a very broad range of bacteria is well established and due to recent advances in the delivery of silver ions, they are being used in a rapidly growing range of dietary-supplement, wound care, medical and industrial products and when combined with singlet oxygen this effect is dramatically multiplied.
