PDR BLENDING HAMMER & KNOCKDOWN PEN

The handle is 40 cm long, made of Hickory wood, balanced and optimized to absorb vibrations and rebound.
Its profile tapers toward the head to provide a wide and unobstructed view of the working area, while the rounded rear section improves grip and facilitates reversed use.

The head is made of anodized aluminum to reduce the overall weight and improve balance, and is equipped with a stainless steel side button for striking on the knockdown pen.

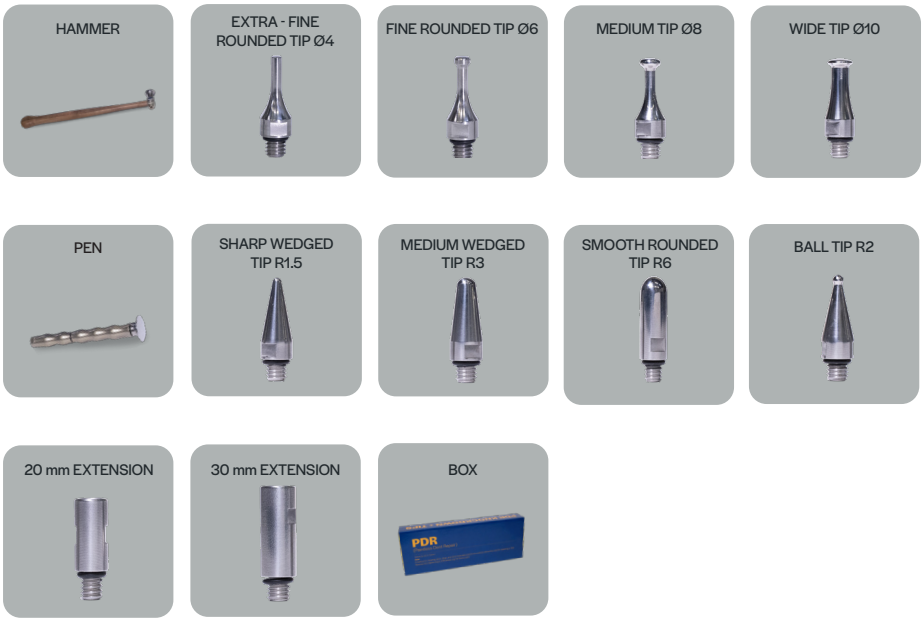

The pen is made of anodized aluminum and separated in two sections, featuring a flat head and finger grooves for holding comfortably.

Professional PDR kit consisting of a hammer for *blending* and a pen for *knockdown*. Supplied in a die-cut box, the kit also includes a set of 8 stainless steel tips + 2 extensions, each designed to meet different working scenarios.

INCLUDED

*Also available without die-cut box: 8013010

BLENDING

Blending is a technique used almost exclusively on concave dents, repeatedly striking their edges to "shape" and stretch the damaged area. Blending tips are tipically flat and wide.

KNOCKDOWN

Knockdown work focuses on reducing and flattening "high spots" (convex shapes) caused by improper tool leverage or aggressive glue pulling.
Knockdown tips are typically sharper and more rounded in order to work precisely on small surface areas.
