Remembering a Legend

Jim Turner: IRT Board member, activist, mentor and a friend to us all.

<https://livehealthybewell.com/podcast/jim-turner-exposes-horrific-dangers-and-corrupt-approvals-of-aspartame-and-other-products-episode-22/>

Study finds major brands selling cat food that contain protected sharks.

Researchers used **DNA barcoding to find that cat food sold in Singapore** from at least 16 different brands contained threatened species of sharks, including silky sharks (*Carcharhinus falciformis*) that are protected under CITES Appendix II. Leading brands such as **Fancy Feast, Whiskas, and Sheba** were amongst those found to contain silky sharks and other species.

<https://news.mongabay.com/2022/03/study-finds-major-brands-selling-cat-food-that-contain-protected-sharks/>

Shark Meat in Pet Food.

An update on this issue following our own research finds the main culprits to be Purina/Nestlé and Mars. Fancy Feast, Whiskas and Sheba, all owned by these companies, are international brands. Although this may be happening abroad we in the West can still write to, boycott their goods at home, and cause them any amount of disruption here.

Remember they're banged to rights because of DNA analysis of meat found in their tins. So there's no saying they're not involved, they have no recollection, or whatever else they might want to claim.

A Case Against the RSPB.

This recently revamped edition now has extra features you may not have seen before.

Pages 3-5. Compares a stark contrast of how the RSPB was in the past to how they are today.

Page 24-25. There's a pet theory of mine as to why some wildfowl species have relatively stable populations while others are declining sharply. The bird charities won't tell you what's happening so you'll have to read about it here.

Pages 29-34. As ever there's the very telling few pages why the RSPB never speaks out against the real dangers birds are facing.

Page 38. And finally, an RSPB's annual report on the state of birds, compared to the one we ourselves drew up in the same year. See which version you think is more convincing.

Please take a read and find out what's really happening to our birds under their watch:

https://static.wixstatic.com/ugd/74da12_40092ea83ab34c4c9d5e0cf6b429bf80.pdf

Choosing which horse to rewild with.

The magnificent truly wild Przewalski's Horse, with its characteristic pale muzzle, upright mane and the striped forelocks (in some specimens these are more pronounced than others).

Following an article we included a couple of months back or so, we had at least a few letters saying what does it matter about what we rewild with just so long as overall habitats are restored.

I'll attempt to answer that with a question. Would we want to see herds of donkeys sweeping majestically across the Serengeti instead of Zebra or Wildebeest? If the answer to that is no, and I sincerely hope it is, then why would we want anything other than the proper wild species horse roaming Europe once again?

Rewilding with the Wildlife Trusts.

Northumberland Wildlife Trust - Wilding West Chevington. Just about says it all doesn't it!

Shropshire Wildlife Trust - Whixall and Bettisfield Mosses. The Mosses are great but the entrance they've got planned looks more like a theme park!

Neil Oliver Live.

<https://www.facebook.com/GBNewsOnline/videos/272802695067664/>

In this remarkably honest broadcast Neil Oliver tells us how things really are with politics today. None of that flower-scented fanny-wash the mainstream media channels like to shovel-feed us with every hour of every given day.

.....

Gmail.

Please note! It has come to our attention Gmail is withholding personal emails from its customers. We know this because of all the returned mail we're getting. Please be aware this is happening if you have one of their accounts. Thank you.

Sites of Special Scientific Interest.

SSSIs, as they're known, are our best wildlife sites noted for their rare species needing the fullest protection. A campaign to have these sites recognised in law was originally fought by Friends of the Earth back in the 1980s. The finally recognition by an act of parliament was in fact an enormous success back then. Nothing like this had ever been accomplished before.

How it works.

The government funds the various overseeing bodies who in theory at least take care of the sites. But like all other great achievements it was never followed through to precisely how this would work out for those species living on said sites. You can have places recognised in law by as many authorities as you like, but unless that recognition translates into care and proper protection, the actual outcome counts for not very much. This is not to say all sites are treated this abominably, but neither too can it be an isolated incident, and so the all too obvious problem remains unresolved.

Natural Resources Wales - Triple SI Management.

This year, as in all others, we follow the muddlings of Natural Resources Wales who look after their own sites in their usual contemptuous ways.

Horses grazing one 'protected' orchid site in April while sheep have access to an equally 'protected' site down the road from here. And nothing much had changed on a later visit there either.

We will continue to monitor these sites throughout the rest of the season.

And then I came across the latest techniques in hedge laying. Slash 'n' couldn't-give-a-fk I think they call this. Most hedges are laid a few inches or so above the base. This one on the other hand was being laid a full five feet up in the air.**

Wind turbines' deadly toll on migrating birds: Map highlights 'collision hotspots' in Europe and North Africa where owls, swans and eagles are at highest risk of being killed by power generators' blades

University of East Anglia study identifies collision 'hotspots' for migrating birds

Many lie in the South of France, Southern Spain and the Moroccan coastline

They are particularly concentrated within important migration routes

Researchers say new developments should be minimised in these areas

They may be considered an eco-friendly way to generate energy, but wind turbines pose a major threat to migrating birds, which are at high risk of colliding with the giant blades while in flight.

Now a new study has identified the collision 'hotspots' where migrating birds such as owls, swans and eagles are most at risk of being killed by turbines or power lines.

The researchers have produced a map, revealing that birds are more likely to get too close to turbines and power lines on key migration routes, on the coast and at key breeding grounds.

Many such spots lie in Mediterranean regions including the South of France, Southern Spain and the Moroccan coastline – such as around the Strait of Gibraltar.

They are also vulnerable in Eastern Romania, on the Sinai Peninsula in Egypt and along Germany's Baltic coast.

The GPS data collected related to 1,454 birds from 27 species – mostly large soaring ones such as white storks.

'The use of high precision GPS devices allow us to study birds' movements in huge detail,' said Phil Atkinson, project supervisor from the British Trust for Ornithology

'Birds do not respect country boundaries and power lines and wind turbines impact migratory birds across their annual cycle, especially for large soaring birds such as raptors and storks.'

Exposure to risk varied across the species, with the Eurasian spoonbill, European eagle owl, whooper swan, Iberian imperial eagle and white stork among those flying consistently at heights where they risk colliding with infrastructure.

The researchers said development of new wind turbines and transmission power lines should be minimised in these high sensitivity areas, and any developments which do occur will likely need to be accompanied by measures to reduce the risk to birds.

'We believe it is the first time GPS tracking data from multiple species has been used in this way,' said lead author Jethro Gauld, a PhD researcher at UEA.

Close-up of the Iberian section of the map shows hotspots in Southern Spain and the Moroccan coastline – such as around the Strait of Gibraltar

'Such measures can include marking power lines to make them more visible and implementing systems to allow shutdown of wind turbines during periods of high bird traffic.'

The academics acknowledge that transitioning to net zero by 2050 is essential if catastrophic climate change is to be avoided.

Onshore wind capacity in Europe is expected to be four times higher in 2050 than it is today, and countries in the Middle East and North Africa, such as Morocco and Tunisia, also have targets to increase the share of electricity supply from onshore wind.

<https://www.dailymail.co.uk/sciencetech/article-10707911/Wind-turbines-taking-deadly-toll-migrating-birds-Map-highlights-collision-hotspots.html>

As always the emphasis is on mitigation rather than just not building the damn things in the first place. Bird-friendlier sites. Whilst it's true some places are more hazardous than others, it is equally the case birds are likely to occur anywhere and everywhere, and so nowhere is safe. But it does at least highlight the very important issue most news outlets will shy away from.

CASUALTIES OF WAR - COLLATERAL DAMAGE.

[https://www.facebook.com/media/set?
vanity=WindEnergysAbsurd&set=a.2367561626621599](https://www.facebook.com/media/set?vanity=WindEnergysAbsurd&set=a.2367561626621599)

Highlighting still further the awful images of wind energy.

2023.

This is the first year in my entire life when I have not seen a single swallow of any kind in the month of April. I'm located in central Wales and it might well be they've been spotted elsewhere in Britain. Or, someone living in my own area may perhaps had seen the odd one or two, but for me at least this my first year ever. I write this in 2022 with the full anticipation of what I might find next year.

Following the trajectory from what was probably a couple of hundred birds or so in the not too distant past, to just the pitiful few birds this year, then that is exactly what I expect to see then. I simply cannot understand how and why it has become so unnoticed.

Swifts and swallows have a particular draw towards tall structures, with the rotating blades of wind turbines and the glowing towers of concentrated solar arrays being an extra irresistible lure. My fear is, unless these dangers are fully recognised and acted upon pretty damn fast, there'll very soon be none of these birds left to see anywhere.

https://www.ted.com/talks/dan_jorgensen_how_wind_energy_could_power_earth_18_times_over

How wind energy could power Earth 18 times over.

Dan Jørgensen.

And how wind could eventually kill off all flying lifeforms 18 times over.

A Vulture being hit. <http://www.youtube.com/watch?v=8NAAzBArYdw>

Bats being hit. <https://youtu.be/mUhEnEMcoIA>

It doesn't take much to imagine as wind increases so too will the mortalities of all things flying through. This includes all birds, bats and insects like butterflies that have been using their migratory routes forever. Neither too has it even been considered how off-shore wind would further impact upon and affect important fish spawning grounds. These people are not conservationists they are dreamers, and pretty nightmarish ones at that.

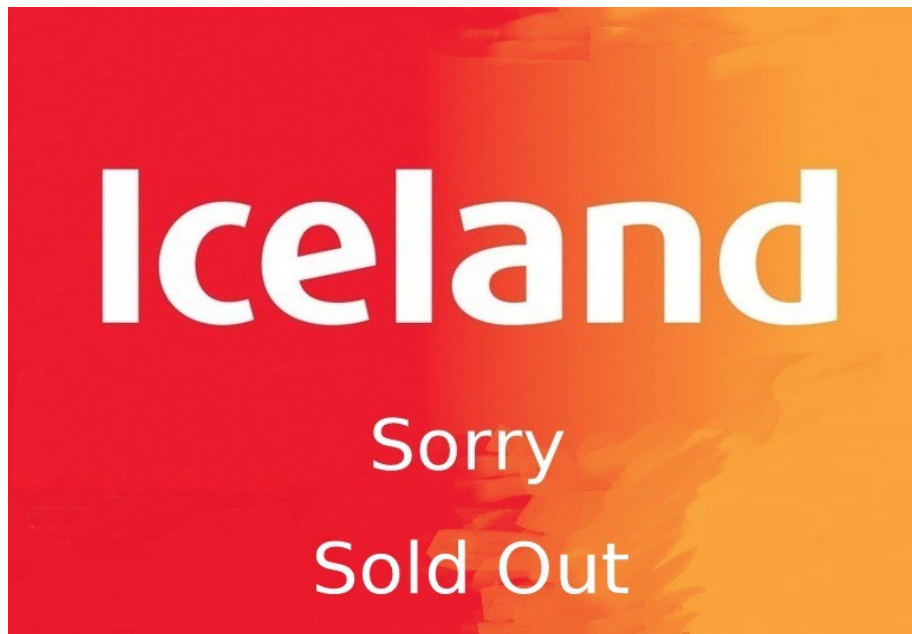

Clear guidance is needed from government to direct all planning decision-makers to radically reform their approach to the planning balance, placing climate change and nature recovery at the heart of all decisions – and at the top of their priorities when making decisions on renewable energy projects.

The Government must also ensure that these planning reforms are able to deliver the levels of renewable energy deployment needed to achieve net-zero. At the moment, many of the changes proposed actively undermine the renewable energy consenting process.

<https://www.scottishrenewables.com/news/1026-how-npf4-could-hinder-our-transition-to-a-renewables-led-energy-system>

Mark Richardson.

Look at this grinning bloody idiot. He wants to weaken the planning laws for us all so that his wind farm ambitions might be realised.

ICELAND FOODS - PALM OIL.

With the current situation in the Ukraine impacting availability, we've agreed to use certified sustainable palm oil with some of our Iceland branded products from June 2022.

Iceland Foods Ltd.

As this NATO led war ripples ever outwards, causing damage well away from the original conflict zone, the affects be under no illusion are as many and varied as they are unexpected. Causing problems in ways that might not previously had been perceived, it's killing wildlife far and wide.

In a further twist of fate Indonesia now bans palm oil exports.

I guess this means they'll now have to find alternatives like they damn well should've done in the first place.

<https://www.ndtv.com/world-news/indonesia-to-ban-palm-oil-exports-to-tackle-domestic-shortage-2912710>

You win some, you lose some.

The Scottish Government has recently published its “Future Catching Policy”, calling it a “world leading fisheries proposal”.

Whilst we welcome the proposals that suggest “spatial management” may be used to avoid areas where lots of bycatch is caught and subsequently discarded, the proposals also say “[f]or undersized fish (i.e. below MCRS), we propose allowing discarding” and for inshore trawlers (i.e. those operating in the sea lochs, sounds and firths around Scotland’s coastline) an additional exemption that “we intend to introduce an exemption for discarding whitefish [cod, haddock, whiting, etc] bycatch on the basis of disproportionate cost”. With these words, the Scottish Government are effectively seeking to undo key EU law aimed at preventing the wasteful (and destructive) practice of discarding fish.

This is a very bad policy.

The ban on discarding was established in 2013 by the EU, it was gradually incorporated into law to allow fishers time to adjust, and quotas were significantly increased to counteract the fact that those businesses bycatching lots of fish would need to land it. It was established to prevent the food and ecosystem waste caused by catching unwanted species and ages (i.e. young and unmarketable) of fish. The whole point of requiring that it be landed was that it would disincentivise catching it in the first instance.

Over the past nine years, the Scottish Government has made some serious errors in delivering the discard ban: the quota increases were gifted to fishermen without condition (e.g. that cameras be fitted to ensure that discarding actually stop) and adequate enforcement of the rules has been severely lacking. The result - discarding has continued and significantly added to overfishing. **Now, having failed to deliver the policy which was supported at the time by some 800,000 signatures, the new SNP/Green coalition government appears to be trying to remove key parts of the ban entirely.**

We consider the proposal to allow discarding of juvenile fish particularly egregious - these are the future of our fish populations (and the fish on our plates). To allow them to be caught, killed in the net and then thrown away is literally taking food away from future generations.

At a time of food insecurity, and during a twin biodiversity and climate crisis, there can be fewer worse policies to be proposing, but it is here in black and white.

We plan to challenge this, and will need your help to do so. Watch this space for things you can do to assist.

Meanwhile, we want to share more news - including the long-awaited verdict of illegal dredging in the Wester Ross marine protected area, the latest film ‘Time Limit’ from the Our Seas coalition and the ongoing consultation for a permanent MPA within the Inner Sound of Skye. If you haven’t already, please check out our campaign to [#EndSeafoodGreenwash](#) and give your support by emailing the supermarkets.

The Open Seas crew

THE WASTEWATER DISASTER IN FLORIDA IS A SYMPTOM OF HOW WE GROW OUR FOOD

Fearing a 20-foot “tidal wave” of contaminated wastewater breaking free from a giant industrial waste pile, Florida officials told hundreds of residents to evacuate their homes in Manatee County over Easter weekend.

Since then, authorities have furiously drained more than a 170 million gallons of wastewater to alleviate the pressure that might have otherwise overwhelmed containment walls. The most dangerous water (which picked up contaminants as it leaked through the breach) was trucked away to be processed — but the rest has been intentionally drained into Tampa Bay, where it could cause more problems.

DISASTERS THAT CAN BE TRACED BACK TO THE AREA’S LEGACY OF MINING PHOSPHATE ROCK

It’s a string of potential disasters that can be traced back to the area’s legacy of mining phosphate rock, which the agricultural industry relies on for fertilizer. The crisis is unfolding at the former Piney Point phosphate plant, where phosphate was mined and then turned into fertilizer for decades until the site was abandoned in 2001. What’s left in its wake are three towering phosphogypsum “stacks” — flat-topped hills of radioactive industrial waste with wastewater ponds at the center.

This isn’t the first time phosphogypsum stacks have suddenly released slurries of water and waste — and it probably won’t be the last. Another crisis like the one at Piney Point could easily happen again unless we rethink the way we grow our food, some environmental advocates say.

“The damage that occurs from just producing fertilizer — not even using it, but just producing fertilizer — is profound,” says Rachael Curran, an environmental attorney in Florida.

A BIG MESS

Florida supplies a quarter of the world’s phosphate and 80 percent of all the phosphate used in the US. Most of it goes into fertilizer.

But before it can be used to help crops grow, the phosphate goes through a chemical process that leaves behind a big mess. Once phosphate ore is dug up, sulfuric acid dissolves it into a “slurry.” The stuff used in fertilizer is separated out from the slurry, leaving behind phosphogypsum as a byproduct. For every ton of desirable phosphoric acid produced for fertilizer, more than five tons of phosphogypsum waste remains.

Phosphogypsum has been used as a construction material in other countries, like China, which produces the most phosphate in the world (the US ranks third). But in the US, the Environmental Protection Agency banned using the material in construction in 1989 because of its radioactivity, albeit at relatively low levels. (Phosphate ore contains some uranium, thorium, and radium.)

Last year, the EPA gave the greenlight to use phosphogypsum with low levels of radioactivity to build roads (it followed a landslide of environmental rollbacks under the Trump administration). But Curran still worries about that — instead of piling the risk all in one place, she worries, that's just spreading it around.

Since it isn't typically used for anything, the phosphate industry pumps its leftover "slurry" into phosphogypsum stacks. Water pools on the top while solids settle and are used to form the containment walls. These "stacks" grow into mountains over time — with some reaching nearly as tall as a 20-story building and as wide as 600 football fields. There are more than two dozen phosphogypsum stacks strewn across Florida.

<https://www.theverge.com/22371931/fertilizer-toxic-legacy-florida-wastewater-disaster-piney-point-phosphate>

It's no wonder Manatees are dying of starvation all around Florida's coast.

Fogging is a technique used for killing insects that involves using a fine pesticide spray (aerosol) which is directed by a blower. In some cases a hot vapour may be used to carry the spray and keep it airborne for longer. Fast acting pesticides like pyrethroids are typically used. This is widely used for sampling or studying insects in the canopy of tall of forests which cannot be effectively reached. The floor below the trees are lined with plastic sheets and the fog causes insects to fall in a rain. These are collected for later study in the laboratory.

Wikipedia.

When used as an aid for scientific research by properly regulated museums the practice might seem a bit more forgivable, but when unscrupulous collectors move in whose only interest is for commercial gain, then suddenly things become a whole lot murkier.

Rather Than Sink Main Street by Raising Interest Rates, the Fed Could Save It. Here's How.

How to avoid the green levies that add £153 on to energy bills

How to beat avoid reduce green levy on energy bills Government clean energy taxes uk 2022

The Government takes a share of every energy bill to fund cutting decarbonisation efforts

Green and social levies on energy bills will cost households more than £150 a year from April, representing 8pc of the total bill.

Energy bills have soared thanks to a rise in wholesale prices. In February 2022, regulator Ofgem announced that the average home on a default tariff will pay £1,971 for their energy from April.

Some £153 of this will be made up of environmental and social obligation costs levied on suppliers by Government. Currently the levy stands at £159.

These levies help fund energy efficiency improvements and renewable projects, as well as social schemes such as the warm home discount.

<https://www.telegraph.co.uk/money/consumer-affairs/how-avoid-green-levies-social-environmental-tax-energy-bill-2022/>

At last we see it written there in print. “Green and social levies on energy bills will cost households more than £150 a year from April.” and “These levies help fund renewable projects.”

It's not enough our wildlife pays such an appalling price for so-called green-energy. We're being forced to fund it through our overly priced bills too!

Mad World of Wind Turbines.

<https://www.youtube.com/watch?v=svicELHAWyw>

“The demonization of Vladimir Putin is not a policy; it is an alibi for the absence of one.” — Henry Kissinger

Crematorium Mythology. A viral tweet that remains to this day unchecked by “fact checkers” claims to show a Russian-operated “mobile crematorium” in Mariupol, but there’s a problem. The image is taken from an 8-year-old YouTube video. If this story doesn’t blow your mind, you’re brain-dead. Here’s another quote from another source. Read this carefully. And a quote from the article. “Shocking footage - originally shared in 2013 - disturbingly shows a circular chamber fitted into the back of the lorry.” What?! 2013? What about now? As in current. And as they say on QVC, but wait, there’s more. This from an MSDNC piece. So help me, this is the quote. “NBC’s Richard Engel says reports that Russians brought mobile cremation machines into Ukraine are ‘credible,’ but there has been no evidence that they have been used.” Again, what?! If there’s no evidence they’ve been used, then what’s the point? (Unless waste disposal equipment delivers the point.)

Americans have either forgotten about or know nothing of #AgendaID2020. And we are a society of amnesiacs who didn’t know anything in the first place to remember. Welcome to slavery. Please, refresh your recollection.

“The question is: Why are the Western powers pressing for the expansion of NATO? Why is NATO being renewed and extended when the ‘Soviet threat’ has disappeared?” This is from a speech from 1996 and the question is even more valid today. Please, have a read.

All of the lies misinformation misrepresentation obfuscation redirection confusion, all of that doesn’t matter so long as we have a population that is asleep and unconscious and unable to apply critical thinking to the obvious. It’s that simple.

Disney's Karey Berk is writing the script for a GOP midterm sweep and 2024 election of colossal proportion. She is representative of the epicenter of a specific and targeted approach to destroy traditional American families by targeting children.

Fundamental and critical children's human development and psychological/emotional wherewithal have been dramatically and permanently impaired and disrupted by virtue of obedience face diapers and a complete and total untethering from medical reality. Happy? See for yourself.

Understand something. The American population is easily duped. Easily persuaded. Easily fooled. And when it comes to war and death point out the bad guy and they'll believe everything you tell them. No questions asked. It's always been like that. And always will be. Sadly.

Pelosi understands on her way out the door with a copy of the home game that the radleft component of the Demons will be its ruination. This is one of the most incredibly important stories that the pusillanimous sockpuppets are too afraid to cover. Tell me again why NATO is still necessary in the 21st Century after the demise of the Warsaw Pact.

The single biggest component—out of four—in determining the price of gas in America is the price of crude oil on international markets. In February 2022, the price of crude made up as much as 61% of the price Americans paid for a gallon of regular gas.

Black Lives Matter (BLM) co-founder Patrisse Cullors has spoken against a report that reveals her organization's purchase of a \$5.8 million mansion in southern California, calling the story a "racist and sexist" attack on the movement. Right.

I'm sure glad that America knew when to pull out of Vietnam. Like Reagan did in Lebanon. The question that none of the media generals address is why in the name of God doesn't Zelenskyy and NATO formalize their complete and total abnegation of future coordination.

SYRIZA leader Alexis Tsipras posted this on Twitter: "The speech of members of the neo-Nazi Order Azov in the Greek Parliament is a provocation. The absolute responsibility lies with the Prime Minister. He talked about a historic day but it is a historical shame. Solidarity with the Ukrainian people is given. But the Nazis can not have a say in Parliament." I could walk into any sockpuppet news media station and no one would understand what this story was even about.

The problem rational Americans have is that it's virtually impossible to lecture countries about invading sovereign nations when we've done it repeatedly ourselves with justifications that border on imaginary. How can we lecture any country on invasion? With a straight face.

Marine Le Pen is presaging what will happen during the midterms in seven months. Political ideology and waves of change happen globally and geopolitically. This is not about the US anymore. In fact, we've been marginalized during the great reset. Focus.

If you need a textbook example of how to conduct misinformation wars regarding civilian casualties look no further than Syria and Douma. What's critical to focus on is how no one questions anything ever. It's like our skepticism was nerve gassed.

“Without promotion, something terrible happens ... Nothing!” — P. T. Barnum

This was rather vatic. As per the NY Post.

What a slap in the face. In footage obtained by TMZ, a video from last year shows Oscar winner Will Smith demonstrating the art of a faux slap to a group of kids. The youngster, reportedly named Chris — an unfortunate coincidence — asked Smith how he fakes fights in his famous films. Naturally, the seeming slapaholic showed him. While Smith didn't actually slap this Chris, it was eerily foreboding of the series of unfortunate events that were the 94th Academy Awards.

Now that the Chris Rock bloodthirsty and brutal beating episode has already lost its momentum, and it has, craven venal pathetic and putrid American media sockpuppets have to return to the usual Vladimir Putin is crazy routine and accepted trope. Which explains my point. When it comes to reality, America is in a coma. And the best part is that per usual, yet-to-be-furloughed American media sockpuppet loons hanging on by a thread are missing the best part of this most obvious artifice chicanery and work. For the uninformed, a work is a pro wrestling term denoting an orchestrated deception or fraud (cf. shoot.) It also connotes the working of the crowd to embroil entangle and invite them into the choreographed commotion. Ahem.

OBLIGATORY DISCLAIMER. Now, it goes without saying that none of us were there and we have no idea what was said or arranged or choreographed or contrived if anything and we can only guess and apply conjecture and blah blah blah. No charges have been filed. Yet. Everyone's presumed innocent. Now, let me continue.

Everything I've suspected so far about the alleged surprise attack was verified by Chris Rock's dubious reaction last night. His first public appearance after one of the most famous incidents in popular history was plain weird. Reticent. Guarded. Confused. Comedy gold (again) ignored. What?! This confounds every instinct that professional comics and entertainers of his stature should and normally have.

Chris Rock — a 57 year-old professional comedian at the end of his career trajectory (let's be honest), trained to seize upon every event in life to exploit it for all its comedy worth — decided to “process” the events of Sunday night, light years ago in terms of ShowBiz exploitation. Process?! Unless ... he can't. And why's that do you suppose? Well, let's think about it. And pay attention.

LIONEL'S LAW: America has the attention span of a gnat. Usually a news story is dead after three days. Tops. Rare is the event for the American community to maintain focus any longer. And even then the storyline has to be changed repeatedly to invigorate and rouse from coma the audience jadrools. Most comics would have booked the nearest comedy basement to seize on this gifted moment immediately while it was fresh. Already so much of the air has been sucked out of the story. Momentum's waning.

Look at the possibilities.

First, if Rock were in on the worst practical joke/work/publicity stunt in the history of recorded failure, he can't say anything now because the time to clear the record has lapsed. And there is much available to make someone doubt the storyline. He had his chance. And if it was arranged, he has to worry about Will Smith cracking under pressure and admitting the charade to get himself out of the jam. Which compounds the matter for both.

Next, Rock might have been told that there are serious investigations going on at the Oscars/Academy and even criminal levels. He might not have officially gone on the record as to his involvement and his lawyers may have ordered him to take the High5. Cutesy talk for the Fifth Amendment.

Next, Mr. Rock may have already made statements to investigators and officials anent the "assault" that he now is regretting and was advised not to mention again in the fear of contradicting or providing proof of prior inconsistent statements, i.e. perjury if under oath. If you think this is far-fetched, look what they're doing to the J6 trespassers.

The bottom line. Rock and his team were presented comedy and publicity gold in this event. Even Pee-wee Herman in 1991 killed with his "Heard any good jokes lately?" riposte fresh from his Sarasota self-pleasure arrest. No, Chris Rock couldn't say anything for reasons beyond good taste. Think. It doesn't make sense. This event could have cemented him as his career reemerged and the only reason the Boston gig was sold out with press from all over the world present was to hear Chris address the slap heard round the world. Then. But no. He had to process. Bullshit.

We live in a boorish rude and crude society with our amps locked in at 11. We live in a grease trap of trolling and violent Karens on airplanes. We want blood. We're gladiators. The world is our Colosseum. You don't let comedy magic like this slip by without exploitation. Unless _____. Unless something gets in the way. Something incriminating. Something never anticipated.

Keep all eyes on Will Smith. What he's going to find out is what happens when society says tag, you're it. When bloodthirsty pitchfork and torch troll brigades smell blood. When the pile-on begins. When he's the target of unspecific and scattered wrath. He thought he was blessed. After all, he's a big star. Hollywood. Come on, man! These deluded children live in a bubble. Inertia. Their own reality and fantasy world. Where they're great and loved and can do no wrong. And any amount of investigation and research into the Smithsphere shows a most weird strange and, er, "alternative lifestyle."

Lionel.

Here's thanking those who have already donated.

If you'd like to donate anyone it would be appreciated. Just a small amount would enable us to be far more flexible with our campaigns than we are at the moment.

So if you can help in any way the details are given below.

Sort Code. 30-94-30

Accounts No. 22185460

User Ref. cates1980

Let's Do This For Polly!

If you've not already done so please share, open the link and write your messages to the pet-food manufacturers.

http://docs.wixstatic.com/ugd/74da12_e4ad32ba6c0147b58b589d24f3c052f1.pdf

This campaign has been a huge success but it needs to go to that next level in order to get those artificial antioxidants removed. Whilst additives like colourants and preservatives have been completely abandoned by many companies the use of artificial antioxidants remain as prevalent as ever. The manufacturers will reply by saying they are safe to use and that all additives are strictly within EU permitted levels. Just write back and tell them you won't buy their products until they're removed altogether.

Please do it for Polly and tell these companies to get this muck out of the nation's pet-food once and for all. This is an ongoing campaign we'll be putting out there until such time as we see significant changes.

.....

Idaho opens first-ever swan hunting season.

It doesn't get much more disgusting than this. Idaho Department of Fish and Game. Please write:

Julie.lininger@idfg.idaho.gov; brad.corkill@idfg.idaho.gov; MagicValley.Commissioner@idfg.idaho.gov; clearwater.commissioner@idfg.idaho.gov; tim.murphy@idfg.idaho.gov; lane.clezie@idfg.idaho.gov; derick.atebury@idfg.idaho.gov; Salmon.Commissioner@idfg.idaho.gov; rules@idfg.idaho.gov;

Voltarol: Active ingredient diclofenac. Highly toxic and not only to Vultures.

<https://worldcowgirl.wordpress.com/2011/07/15/in-india-cattle-and-the-vulture-crisis/>

Thanks to lobbying from them, diclofenac is now in widespread use as a veterinary drug throughout the EU., knowingly endangering its Southern European vulture populations. This company still continues with its TV. ads. so please write to them even though you may've done so several times before.

The tell-tale signs of diclofenac poisoning, the head hanging from its drooping neck. A magnificent bird reduced to this pitiful state

<http://www.bing.com/images/search?q=vultures+dying+from+diclofenac+poisoning&FORM=HDRSC2>

Please click onto this link, download this image and send it to. Now owned by GlaxoSmithKline. Please write to: community.partnerships@gsk.com; medinfo.uk@novartis.com

Each and every time you see this worthless piece of hype on the television send it over to them and let's shame them off the box.

<http://raptorpolitics.org.uk/2015/03/12/another-mass-poisoning-of-vultures-in-asia-at-least-20-himalayan-griffon-vultures-dead-in-india/>

The VCF and its partners have been working on anti-poisoning activities, campaigns and programmes in Europe. Please check the link below for more details.

<http://www.4vultures.org/our-work/anti-poisoning/international-workshop-african-vultures-poisoning/>

Concluding: We print any letters here from all sides of both arguments. So long as it's relevant to the subject matters and provided it's not obscene we will print it. If you disagree with anything that's been said, please write in. This is a public arena so please feel free to have your say. Contact details will always be withheld.
