

**HIPAA & PCI
COMPLIANCE AS A SERVICE**

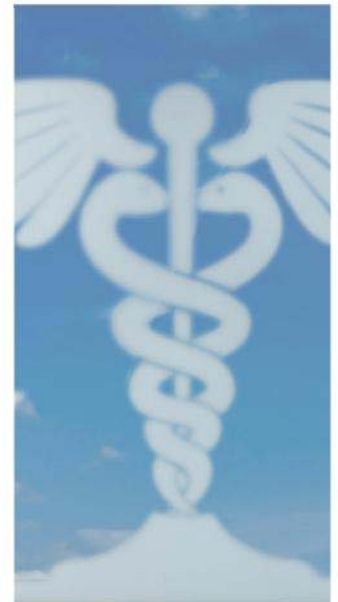

HIPAA & PCI compliance has become a **BUSINESS IMPERATIVE**

WHEN WAS YOUR LAST ASSESSMENT?

If over a year ago, you are out of compliance and at serious risk of being audited and fined by state and federal auditors. Even worse, you are likely vulnerable to data breaches or IT intrusions that result in fines up to \$50,000 per record and class action lawsuits.

The federal government recently expanded its on-site HIPAA audit program and has been imposing multi-million dollar fines on businesses for IT environments that fail to adequately safeguard electronic Protected Health Information (ePHI).

IS YOUR NETWORK HIPAA & PCI COMPLIANT?

HIPAA Compliance as a Service includes continuous monitoring of your IT environment. Our HIPAA-certified staff evaluate changes in your environment that may impact the confidentiality, integrity and availability of ePHI. We'll identify required updates to your HIPAA Management Plan and provide updated records required by regulatory authorities to document ongoing assessments and compliance activities.

Effective Payment Card Industry Data Security Standard (PCI DSS) compliance practices can protect the value of your brand and help you avoid the business 'death penalty' of losing your right to accept credit cards, which could put you out of business. A PCI Risk Assessment and ongoing PCI Compliance-as-a-Service offerings provide continuous support to help ensure your business is compliant with ongoing assessments and activities.

Our Network Risk Assessment will let you know exactly where you stand

HOW PREPARED IS YOUR BUSINESS?

Our HIPAA & PCI compliance practice team will quickly assess your IT environment for HIPAA Security Rule compliance, identify risks to your network, and provide specific recommendations to get compliant and stay compliant.

Each no-obligation assessment is performed by a HIPAA certified IT professional who will provide you with:

- A HIPAA risk analysis report that identifies where ePHI is located, your existing security protections, and additional protections that may be recommended
- A HIPAA management plan with recommendations to address potential issues, prioritized based on risk level
- Policies and procedures containing best practices to comply with technical requirements of the HIPAA Security Rule

This year over 3 million healthcare facilities, law firms, accountants and other businesses that perform services for health care related companies are being targeted for HIPAA compliance audits.

With fines of \$50,000 per record for violation of electronic Protected Health Information (ePHI) requirements and the federal government's recent expansion of its on-site auditing program, HIPAA and PCI compliance has become imperative to the health of a business.
