- EF HANG WITH GROMMET

Take the Etiflex Challenge!

That's Right -Take the Etiflex Challenge and let us show you how much better our tags are than the one you are currently using. Please find enclosed a standard molded Etiflex sling tag for the Challenge.

Get one of your existing Sling tags and walk out to the parking lot or find a concrete surface. Just lay your tag face down on the concrete and press down firmly on it and rub it slowly back and forth around 10 times and then repeat this with the enclosed Etiflex brand Tag! Now compare the difference in the surface and readability. Etiflex tags are not printed or embossed, but are molded in separate colors so that the important information is permanent. It is raised in a three dimensional format that is easy to read and won't wear off.

With over a million Etiflex® sling tags already in the field, we have the experience and the right program that will work for your company. In fact, not one of our customers has switched back to another brand! That is why we are confident that we can win the challenge every time!

In this industry the ID Tag is not just a label, it has become an important component of your product: one that is essential to keeping your products in service.

CALL TODAY at 866-ETIFLEX and ask about getting started with our synthetic or wire rope labels.

WARNING
 Failure to comply with this warning may result in severe personal injury or death.
 *Inspect sling for damage before each use.
 *Always protect sling webbing from sharp edges of loads.
 *Do not attempt to use sling above rated lifting capacity.
 *Do not use sling if capacity tag is removed.
 *Do not expose sling to temperatures above 180°F.
 *Do not tie knots in sling webbing as strength is greatly reduced.
 *Do not use sling if there are any signs of cut webbing, heat or chemical damage, excessive wear, or other defects.
 *Consult sling load chart for basket hitch capacity reduction due to sling angle.
 *Do not use near caustics.
