

USES

EF Etiflex®

SLING TAGS & YOU SHOULD TOO!

Protect Yourself & Your Personnel with the Best Tags Possible

Etiflex is a Registered Trademark of Etiflex Corp, a leading supplier of molded multi-color labels. Etiflex brand labels are used by some of the most demanding customers and toughest environments around the world!

Offers Many Unique Advantages Over Printed & Metal Labels

Excellent Abrasion Resistance: Etiflex tags last longer than printed tags because of their proprietary compound, and raised borders that protect the text and custom markings. Etiflex molded text is up to 100 times thicker than on a standard printed tag.

Easier to Read: Raised letters and vivid colors contrast make Etiflex tags easier to read- especially when wet or dirty.

UV Stable: All our tags are UV stable and designed for outdoor & harsh environments, and good for temperatures from -20F to 280F

Chemical Resistant: Unlike many printed tags, the Etiflex tags are resistant to all common cleaning compounds (includes solvent based like Acetone) even exposure to gas, diesel fuel, and oil.

Inspection & In Service Data Tags: Let us perform your inspections using the Etiflex patented marking system to keep an inspection and compliance record directly on the sling. It can also be used for in-service dates to record when the sling is actually put on the job. All Etiflex tags can be color coded by date, facility, type or size capacities.

EXTRA ADVANTAGE

Laser Engraved Tags: We have invested in Laser Engraving Equipment so that our tags come with permanently engraved data. There is no handwritten information that can be wiped off or difficult to read!
