

AVITAS

Commitment to Product Safety

Avitas Products are 100% Cannabis and 100% Natural!

Avitas was founded on the principle that high-quality cannabis should be readily accessible for responsible adults to safely consume

We take our mission statement seriously and we share great concern about the individuals who have been harmed vaping cartridges or e-cigarettes. We are monitoring the situation as it unfolds and will provide updates as clearer data is available. Right now we are 100% confident none of our products are involved in the current issues.

In the meantime, we want to ensure our customers and partners understand that WE DO NOT use cutting agents or any other fillers including Vitamin E Acetate in our products. And never will. Avitas Products are 100% Cannabis, period. Avitas products go through several rounds of quality control before it reaches our customers' hands. We test each batch of flower and oil through state approved and accredited laboratories to exceed state guidelines. We are actively working with our lab partners to institute voluntary vitamin E acetate screening as soon as possible. This will provide another level of screening and provide comfort to our community as we are operating in this space of uncertainty, and lack of clarity from the press and regulatory agencies. We also only use certified CCell 510 threaded cartridges and all in one pens, and Pax Pods for our hardware.

We're obsessed with bringing you the best flower and oil possible and we're committed to ensuring our products are safe for consumption. 100% natural, 100% cannabis.

Avitas - What is 100% natural

What does 100% Natural mean? To Avitas, that means not using additives or cutting agents (vg, pg, peg, mct, etc) and NO THICKENING AGENTS (vitamin e acetate). 100% Natural means ensuring our flower is grown without the use of harmful pesticides or fertilizers containing heavy metals. It means thoroughly testing every batch of flower pre-extraction to ensure no contamination, and post extract to ensure no concentration of pesticides and heavy metals. 100% Natural means ensuring our extracts are batch and strain specific, which means the cannabinoid and terpene content are specific to the strain, the specific harvest and batch listed on the label. We don't add terpenes from other sources, we don't add THC to spike potency results, we don't buy bulk product and slap our name on it. We strive for our extracts to represent the flower it came from, both from a flavor and experience perspective, just concentrated. That is our [#mission](#).
