The HAPPYGUITARIST SPEAKER SIMULATOR features an even balanced tone and a little "honk" in the midrange that is just perfect for rock and blues. Forget about any high end harshness, the sound is warm and present throughout the entire fingerboard. Add a bit of distortion and you're ready to roll...! Its versatility in connections further is awesome, I actually use it to double my miked amp with a straight signal as a second input into the board and some 10 o'clock -2 o'clock panning in the mix for that HUGE sound. The end result is a "push" feel on stage that makes you play with a smile. Just love it, well done Charlie! Alex Klein.
