

# Understand, Control, and Maintain Compliance in Your Network

## Mitigate Risk

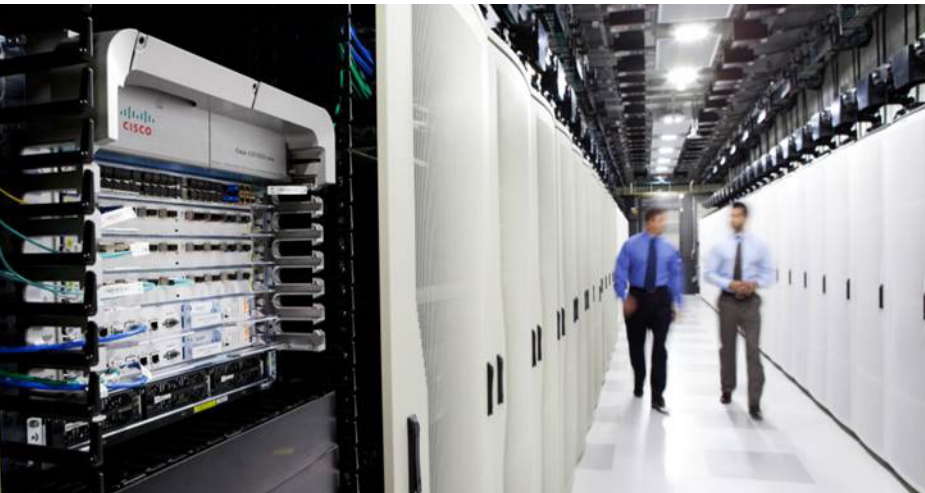

Collect all network device information and run security audits to check for compliance.

## Control Change

Implement policies for compliance monitoring with configuration analytics, reporting, automated compliance checks and remediation steps.

## Maintain Business Continuity

Increase network uptime and stability. Fully archive and restore capabilities for configurations.

Proactively manage change and build a network that you and the various organizations you work with can rely on.

## Cisco Compliance Management and Configuration Platform

Automated, consistent processes can improve alignment and integration across your organization, resulting in true business transformation. These processes can help you avoid the cost

of configuration errors and noncompliance by making sure the changes made in your network are done correctly and consistently on all devices.

# The Cisco Solution

Cisco Compliance Management and Configuration Platform (CMCP) helps you understand and control organizational, commercial, and regulatory compliance across your entire network by assessing and remediating outdated and inaccurate software images and configurations to achieve and then maintain ongoing compliance and configuration standards.

## With Cisco Compliance Management and Configuration Platform you get:

- + Network management tools
- + Software automation
- + Cisco intellectual capital
- + Industry standards
- + Operations expertise

## Availability

## How Compliance Management and Configuration Platform Works

A big part of managing your network is managing change and we know that change should be performed in a secure and predictable manner. Key software features that facilitate this include:

- Software Image Management – Advanced functionality to enable image promotion, restoration, and monitoring
- Configuration Management – 2,500 best practices and configuration guidelines embedded in application database
- Compliance Management – Craft internal policy and measure against regulatory compliance
- Workflow Management – Complete workflow management with customizable user roles

## Why Cisco?

With Cisco, you can know more, save more, and innovate more. You can rely on us because we are the worldwide leader in IT, helping companies seize the opportunities of tomorrow.

We have more than 30 years of experience, more than 50 million installed devices, and 6 million customer interactions each year.

Delivered by Cisco and our Cisco channel partners, service engagements result in measurable business gains for our customers.
