

Surgical diseases Sebaceous Cyst (atheroma cyst) and hemorrhoids

-
-

0. Medical definition of both diseases with necessary additional clarification

-

Sebaceous cyst

https://en.wikipedia.org/wiki/Sebaceous_cyst

-

hemorrhoids

<https://en.wikipedia.org/wiki/Hemorrhoid>

-

Atheroma

<https://en.wikipedia.org/wiki/Atheroma>

-

In Slavic and some other languages, the term atheroma is used in clogged sebaceous gland with stinky manure. In English, atheroma means a dangerous lining of the inner wall of a vessel, which can lead to critical clogging or stroke.

-

For my sebaceous gland cyst, I used Grabovo's healing number for surgical for the surgical diagnosis of atheroma 888888179 and the problem disappeared within days. All other sets were ineffective.

-

1. Non-invasive solutions to surgical diseases

-

I would like to inform everyone interested in the information that enables them to avoid scalpel and completely eliminate the problem in a non-invasive way.

-

Until someone tries this on their own, it is hard to believe that it would be possible to resolve surgical conditions other than by surgery. The following are two examples: recovery of sebaceous cyst and recovery of hemorrhoids. These are two of my concrete proofs for the successful use of information technologies by dr. Grigori Grabovoi for the Treatment of Surgical Diseases.

.

2. Sebaceous Cyst

-

A clogged sebaceous gland can result in painful accumulation of stinky pus in the cyst. Ortho medicine solves this by surgical removal and then outpatient rewinding.

-

To remove the cyst by concentrating on Grabovoi's healing number series, we use a number series for the surgical diagnosis of atheroma.

-

Atheroma **888888179**

-

The code is visualized in the area of the cyst in silver-white light. Repeat several times daily until disappearance. Visualization of numbers on the cyst is probably the most effective, but alternative articulation can be performed using a string in the sphere. For smaller cysts, results can be given in a few days.

-

3. Hemorrhoids

-

Hemorrhoids are swollen veins in the soft tissue around the anus and lower part of the rectum. It can be painful, bleeding, itchy and in case of advanced disease, surgery in ortho medicine is required.

-

The code for surgical diagnosis of hemorrhoids is used to normalize the condition of the affected venous scar by concentrating on Grabovo's healing numbers.

-

Hemorrhoids **58143219**

-

The code is visualized in the disease area in silver-white light. Repeat several times daily until disappearance. Visualizing the numbers on the hemorrhoids is probably the most effective, but alternative articulation can be performed using a string in the sphere. For smaller initial stages of the hemorrhoids, the results can be given in one day.

-

-

PS

-

Of course, some readers will say that my placebo helped me remove the cyst. But to me this set was not logical at all and I just used it in despair when no other set had any effect. And so I didn't expect anything.

-

But I expect someone to explain to me why some people call Grabovoi's quantum information management technology a "placebo".

Dr. Lipton has demonstrated the impact of consciousness at the cellular level. Shortened and simplified, this means that quantum effects also apply to the macro.

-

Therefore, according to this logic, is placebo also the basis for effects in quantum physics?
