

## General recommendations for information management by the methods of dr. Grabovoi

-

When we concentrate on Grabovo's numerical codes for the purpose of normalizing states and events, we use our consciousness, that is, the mind as a quantum instrument for managing information. Nobody talks about if maybe quantum physics is based on a placebo ..... who knows, but it doesn't even matter. You may also be interested in a special state of consciousness for concentration. The answer is no. The various changed states of consciousness are not even advised. However, it is useful to exercise for better concentration.

-

But it is important to know how to accelerate and improve our results when using Grabovoi's technologies. One good option is to work for a macro solution for everyone and yourself. It's very simple but extremely useful. You do not have to do anything other than declaring your intention to work for a macro solution for all people, for the planet, and for yourself, before committing your concentrations. At the end of your personal assignment, repeat the harmonization code 741 -3 times, then concentrate on the code 889..8 for management materialization. Then just record the place, date, time and confirm the management via the macro solution field. Finally, thank the Creator and Grabovoi.

-

These are just recommended options. You can use all of the above, select a part, or omit everything. Concentration can be performed verbally, visually, combined, or only mentally.

-

However, we can create much greater effects of quantum information management based on collective management for the same purpose. For example, an FB group may organize itself to treat its member at a specified time. Such a group can also choose to target tasks of normalization in the areas such as collective consciousness, security, social care, health, etc.

-

Let's look at the impressive figure for the amplification factor of the effects of collective concentration on the same objective as that given by dr. Grabovoi. He holds several PhDs, including one in quantum mechanics and one in mathematics.

-

The power of collective action in managing information is expressed by the reinforcement factor.

-

The mathematically defined factor for reinforcing information management at a collective concentration on the same common goal is as follows.

-

Two people working on the same goal reinforce each other 7 times,  
three people have an effect 49 times stronger (7 squared)  
11 people reinforce each other by a factor of 7 to a power of 10, it is more than 282 million times.

-

The general formula of amplification at a collective concentration per common target is therefore 7 per potency  $n-1$  (7 potentiated by the exponent  $n-1$ ), where  $n$  is the number of people with the same target.
