Canvas Media Comparison

Canvas supports tools for media creation in course content. This document is intended to show the pros and cons for media content in Canvas, Arc, and mobile products. Some media types are not saved for reuse, so you may need to consider a different method depending on the media type.

Canvas (Web Browser)

Canvas is a cloud-native learning platform and learning management system that provides several options for creating new media and uploading existing media. The following tables show each location that accepts media in Canvas while using a web browser and details about the media features.
