PIXEL

RumahCuans's Pixel Trading System

Command : /pixelf<space>code<space>timeframe (for foreign market)
/pixel<space>code<space>timeframe (for indonesian market)

The question that often arises in the minds of traders is this trend still going to continue? and another question that also often arises is how can you take part in the big profit wave?

This short tutorial will show a way that is very easy for us to read but can provide amazing profit, and we can get a good position according to the direction of the trend.

This tutorial uses the charting feature in Telegram Bot
@ALBERTUS_FREDDI_FOREX_BOT (for international market) and
@ALBERTUS_FREDDI_BOT (for Indonesian market)
For those of you who have never used a Telegram on an Android or iOS based Smartphone, please install the Telegram Application that can be downloaded via Google Play or iOS AppStore.

For those of you who already have a telegram or just register for a telegram, don't forget to fill your USERNAME in telegram.

"Find easy-to-use tools to get AMAZING PROFIT"

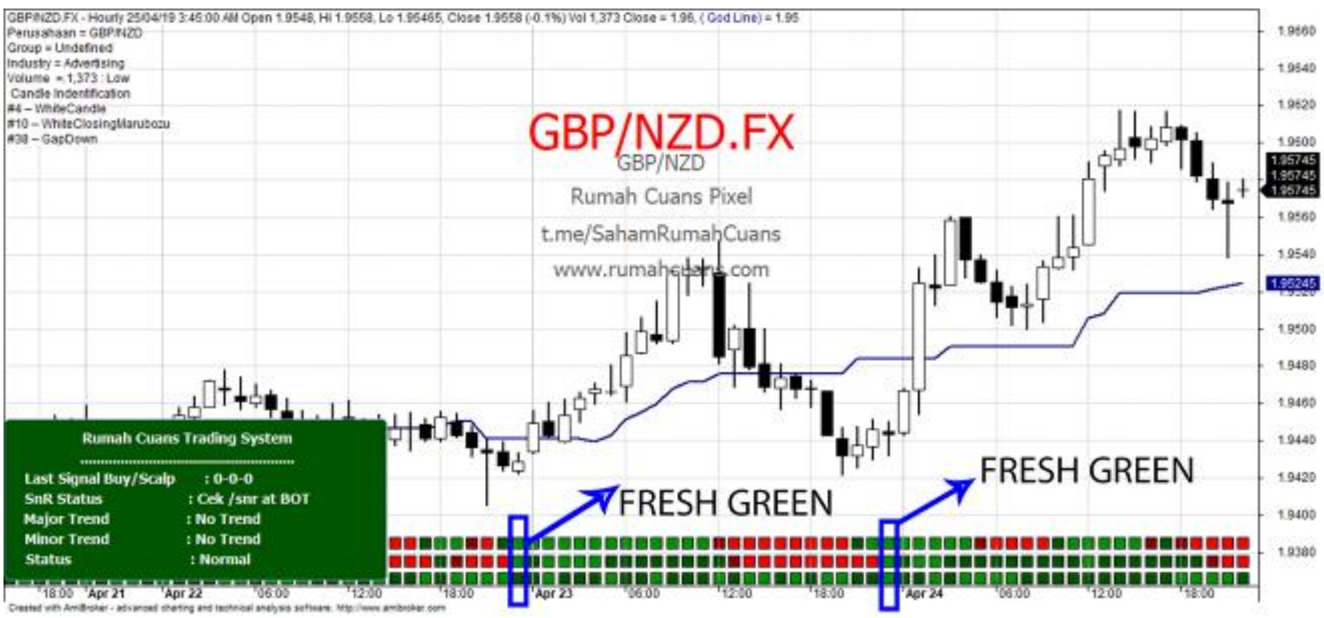
-Albertus Freddi Setiono-

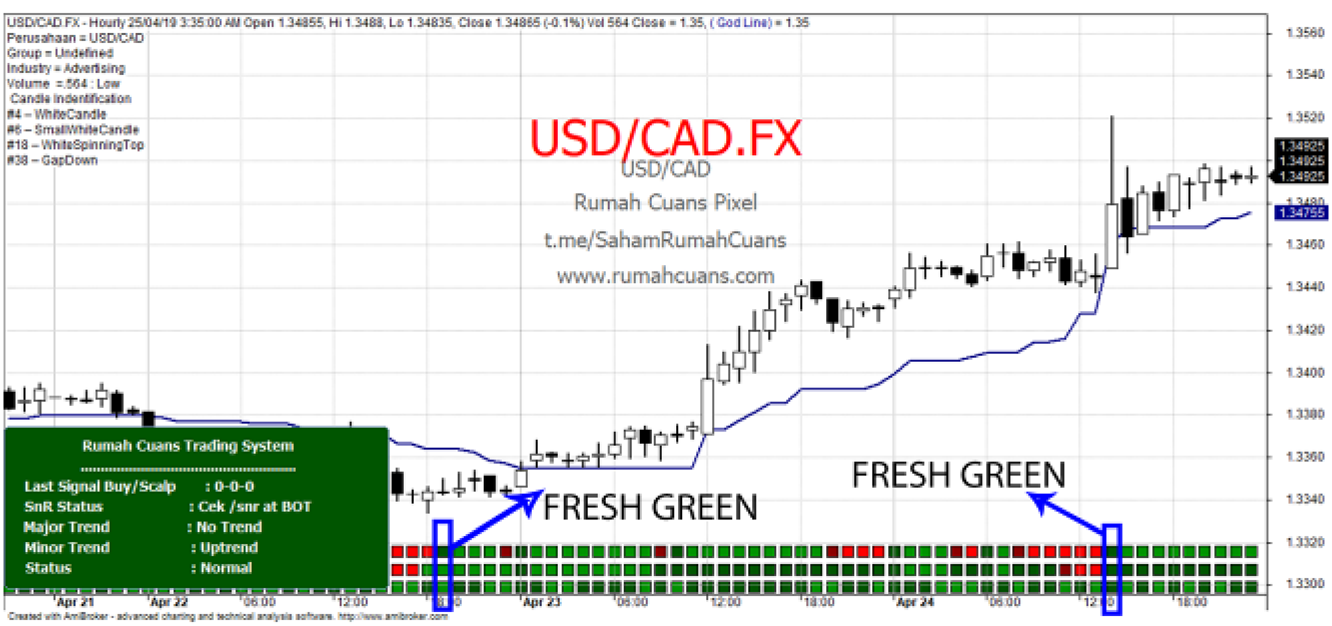
WHAT WE LOOK FOR ?

BUY SIGNAL

The following are 3 important conditions that can indicate "BUY SIGNAL":

1. There are 3 FRESH GREEN pixels that previously EXPERIENCED 2 RED PIXEL, this is called FRESH GREEN (There is no difference between darker colored pixels. It's just that the darker ones have a higher selection).
2. And what is called REPEAT GREEN because the price is almost similar to FRESH GREEN can be called REPEAT GREEN, so it's still good to buy because it's not too late.
3. Pay attention to GODLINE as strong resistance.
4. Note also the trend status to strengthen indications of price increases.
5. Always use trailing stop when you already profit.



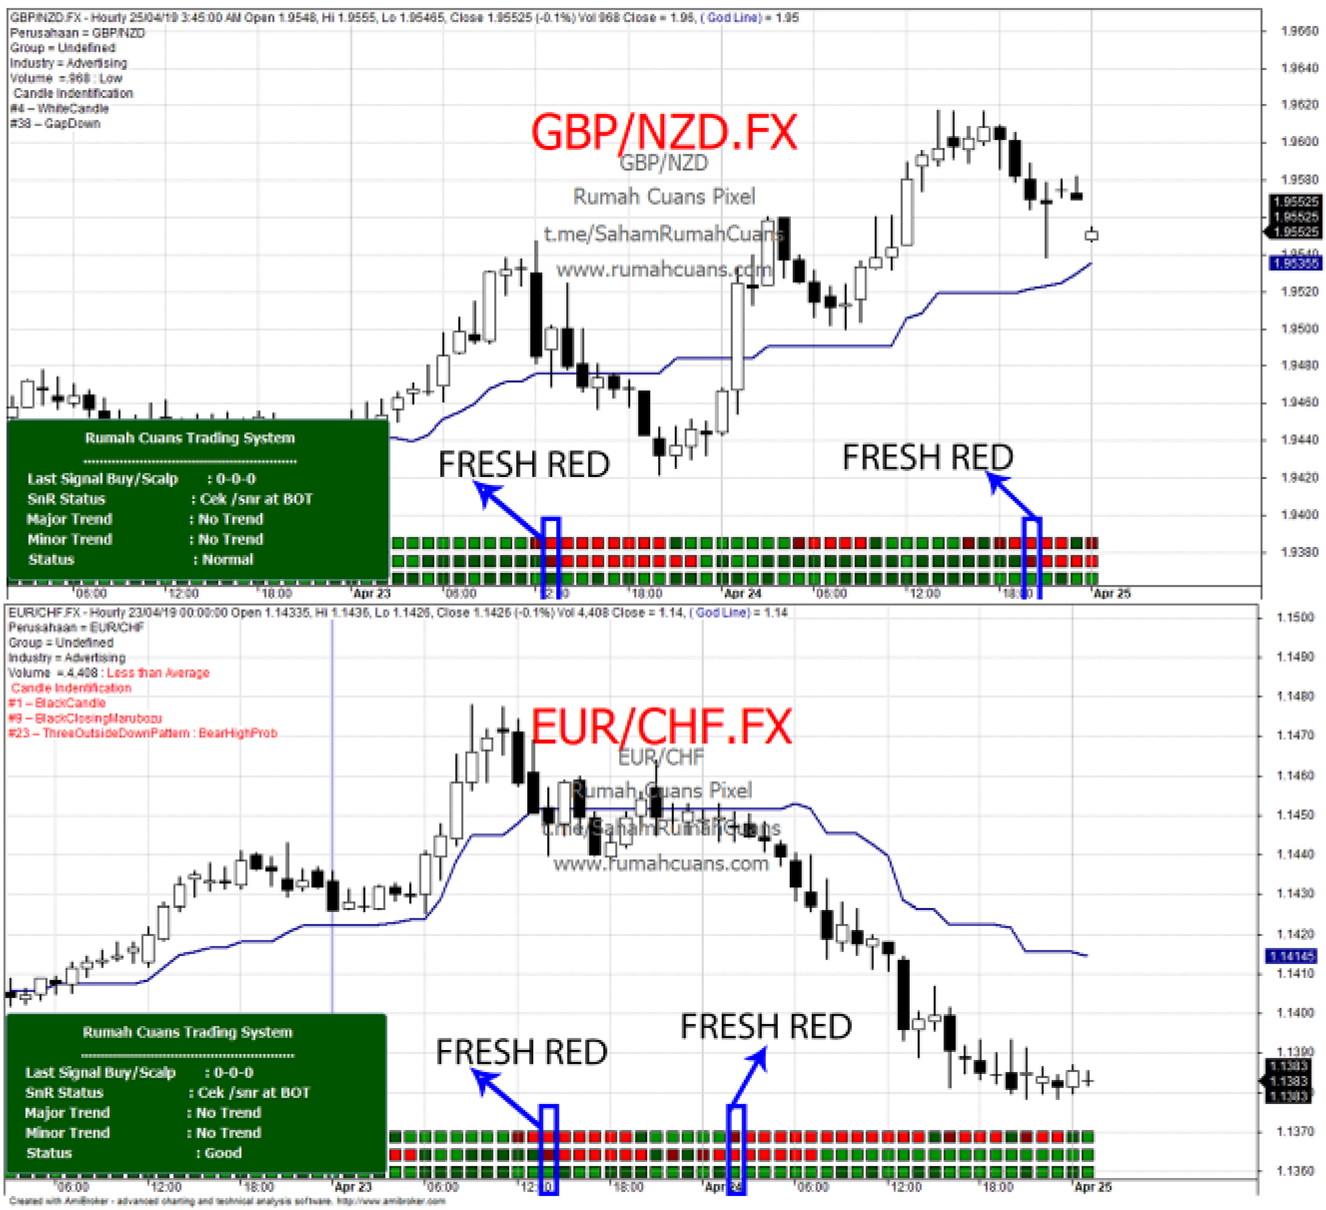


WHAT WE LOOK FOR ?

SELL SIGNAL

The following are 3 important conditions that can indicate "SELL SIGNAL":

1. There are 2 FRESH RED pixels that previously EXPERIENCED MINIMUM 2 GREEN PIXEL, this is called FRESH RED(There is no difference between darker colored pixels. It's just that the darker ones have a higher selection)..
2. And what is called REPEAT RED because the price is almost similar to FRESH RED can be called REPEAT RED, so it's still good to sell because it's not too late.
3. Pay attention to GODLINE as strong support.
4. Note also the trend status to strengthen indications of falling price.
5. Always use trailing stop when you already profit.

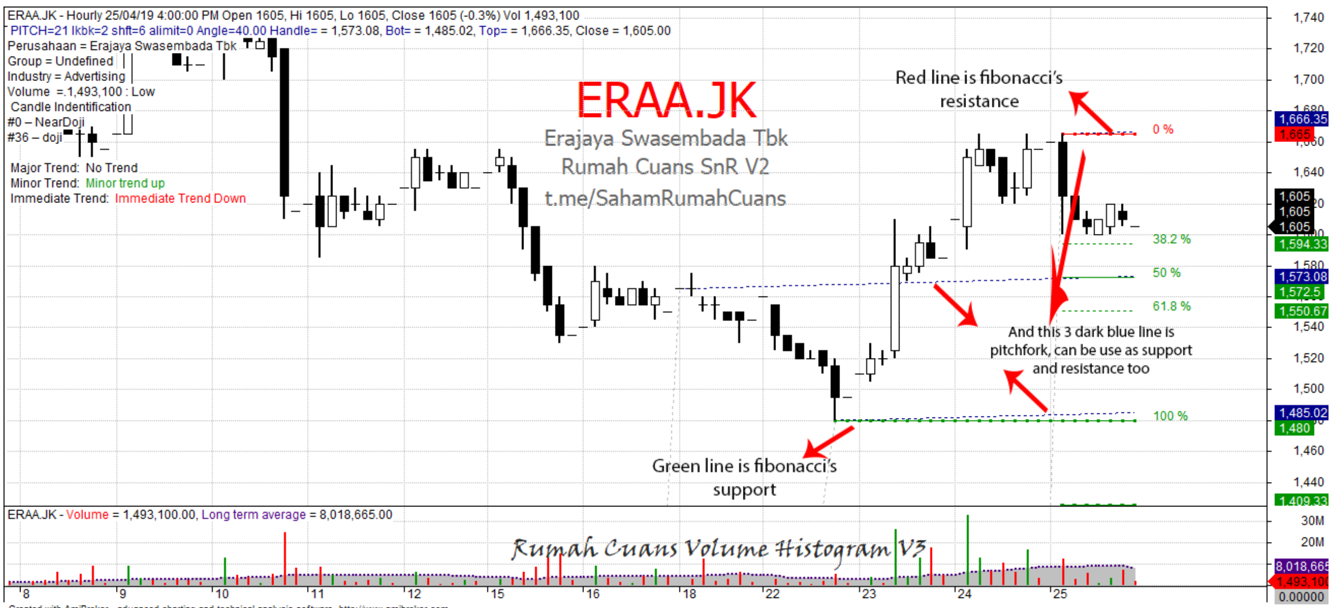


Support n Resistance

RumahCuans's Support n Resistance Trading System

Command : /snrf<space>code<space>timeframe (for foreign market)
/snr<space>code<space>timeframe (for indonesian market)

The SnR concept from the RumahCuans is slightly different from the others.
Why? because this concept combines two different types of support n resistance, namely pitchfork with Fibonacci, so that it gets some support and resistance that can be believed because the bounce rate is quite high.
This tool using automatic chart bot, so everything draw here that's is automatic by our bot. And be remember, pitchfork not always can be draw in the market.
So I can say that this tool will be VERY AMAZING if you combine it with pixel tools from RumahCuans.



Well, you can see, the GBP / CAD position is currently at 1.74205 and closer to resistance at 1.74248 so you can buy if break after resistance, with note if GBP / CAD position is still in WARNING status then tight stop stop 4 -5 pips below the support (1.74046). And if GBP/CAD have FRESH GREEN PIXEL and breakout with SPIKE VOLUME you can add more position.

"PROFIT will always be your right"

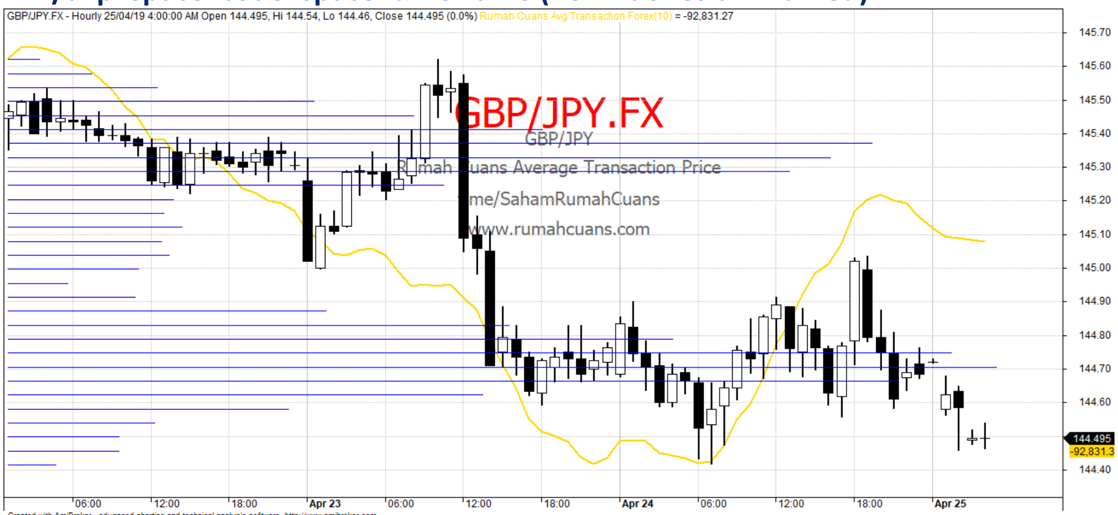
Average Price Transaction

RumahCuans’s Average Price Transaction System

Command : /avpf<space>code<space>timeframe (for foreign market)
/avp<space>code<space>timeframe (for indonesian market)



Let's try to see the picture, the command /avp or can be called average price is to see the average price of the transaction for a certain period, this is very suitable to see the average price in the market, or average invest price all detected there.
Can be seen on the chart GBP / JPY the longest line is around the number 144,709, this means that from a few days ago until now the most transactions are done at that price, then what is the use of the yellow line?

Yellow line is useful to see price movements in real time and the pressure of market not only the average price, so this is combining all the formulas.
This avp / average price works for :
1. See the average transaction price / check 3 of the longest lines.
2. Realtime viewing of fair price / transaction movements.

So, if LONGEST LINE STILL ABOVE AND PRICES BOUNCE IN YELLOW LINE (or invert) it means the potential for rebound is very large.

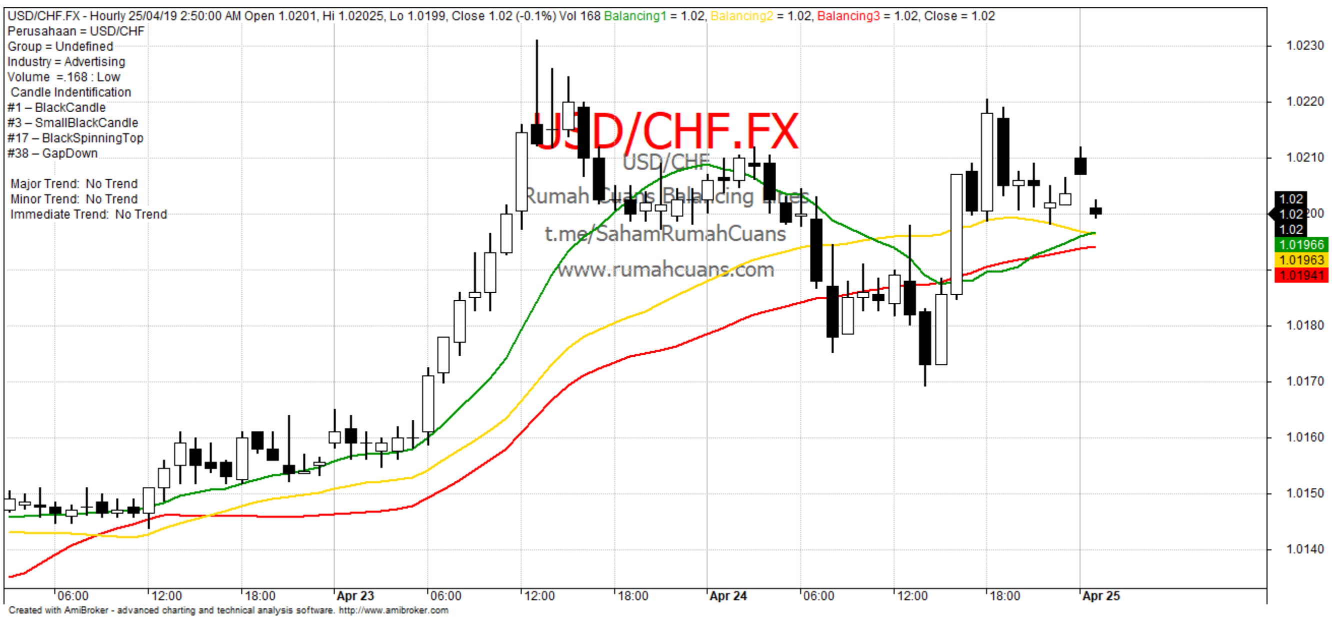
“You’re in PROFIT and they’re in LOSS. It’s not a crime”

-Albertus Freddi Setiono-

Balancing Lines

RumahCuans's Balancing Line System

Command : /blinef<space>code<space>timeframe (for foreign market)
/bline<space>code<space>timeframe (for indonesian market)



BALANCING LINE is a Moving Average that has been modified with various algorithm mixes, so how to use it can be said to be exactly the same as MA. We can use this balancing line to get direction of a market / trend.

So simple, when balancing line 1 is above balancing line 2 and balancing line 2 is above balancing line 3 then it's UPTREND (just remember if the car is racing, 1 2 3 GO means forward / Uptrend so the order is like red light at the road, if GREEN light at the TOP then it's UPTREND), if invert (RED at TOP then YELLOW in MIDDLE and GREEN at BOTTOM) it's DOWNTREND. if it's random pattern its SIDEWAYS.
