

Dropboard Planning Platform for Ports now available

Systems Navigator launches Dropboard Planning and Scheduling platform for Ports.

DELFT; Feb. 25, 2019 - Systems Navigator is excited to announce the launch of its new Dropboard planning and scheduling tool for Ports. Dropboard will modernize Ports current system of resource planning with user-friendly logging and scheduling all integrated into one system. Ports will have the ability to easily view performance and manage scheduling KPIs based on data analysis build into the system. This will ensure best practice and smooth operations.

Dropboard is designed to assist ports with daily and future planning. Systems Navigator's unique Smart Scheduling technology advises on resource allocation, berthing, turnaround times and process times. This empowers the planner to select the best arrival slots and optimize resource allocation. The Smart Scheduling technology is constantly evolving; it learns, develops and improves over time. This provides expert knowledge at your fingertips.

Using Dropboard leads to reduced errors in communications and provides transparency, developing trust and confidence.

Systems Navigator Commercial Manager, Joost Smits says: "We are excited to expand the Dropboard product suite, so Ports can also benefit from our technology."

About Dropboard

Dropboard planning and scheduling system is designed to assist planners in the Maritime industry with daily and future planning. Systems Navigator's unique Smart Scheduling technology provides expert knowledge at your fingertips. Optimizing the schedule provides opportunities to decrease waiting times and berth occupancy, and increase throughput and revenue.
